

I finished doing the data analyses on the data collected via our survey. I have added several files to [.The Data Files!](#) page

There are three files that provide analyses of the variables you selected... you need only download the one that involves the *descriptive* variable YOU chose: age, sex assigned at birth, or gender identity. (You can download the others if you want, but don't get confused and use the wrong one... they are pretty
.(clearly labeled

You will need the information in this file to put together your [Results](#) and [Discussion](#) sections for the
.project

If you have questions, ask... but the *findings* documents are lengthy and reasonably thorough... if
.you read it carefully things should be pretty clear
