SCI 1901 Research Project

For your project, you are to choose a human disease that you find interesting and create a poster presentation explaining the key aspects of your chosen disease. You can create the poster in PowerPoint or another program of your choice if it's in a format that I can open. Here is a link with instructions on how to set up a poster in PowerPoint: Poster Presentation Guide.

Your presentation should include important information such as the background/history of the disease, etiology, pathology, epidemiology/distribution of the disease, medical treatments, diagnostic techniques, current advances in understanding, or any other relevant information pertaining to your disease of choice. You will also need to properly cite references and images that are not your own—otherwise, you will be plagiarizing.

There will be an example poster (created by me) and a rubric posted along this assignment. Please reference those for my expectations as well as ideas on what a poster presentation looks like visually and contextually.
