

Title

Presenter details and affiliations

Introduction — Most important information to 'setup' study — Statement of the problem, important background information, statistics, etc. Include your purpose and research questions here. — Tell the viewer why this is important

Method — Search methods, key terms, inclusion criteria, number of studies, focus of data extraction, how you grouped your articles (themes),

Image/table/graphic — find something that represents your research. A graphic of a particular intervention, the population you're focusing on — if you can fit a table here — be creative

Results — number of studies that met inclusion criteria for each theme — main focus of articles and their results — overall results across studies for each theme — similarities/differences in the results of articles in each theme — extract information from the results section of your paper that you think are most important — trends, development,

Image/table/graphic

Conclusion — answers what the most important results were — relate back to your purpose and research question — interpret the results — suggestions for future research — suggestions for improving practice — overall take away points
