

Each annotation should include the citation of the source, just as you would list it in the reference list. Identify the author and make a statement related to the author's qualifications. Identify the research question. Identify the research problem that the author hoped to resolve. Identify the methods used by the author to investigate the research question. Provide a summary of the findings. Evaluate the work. You can do this by addressing the arguments that were made in the research study or discussing the value that the research study findings have for the field: how it advances the knowledge base. Finally, discuss how the study supports your research topic. Identify whether the article is chosen for its usefulness in terms of method, content, or both content and method.
