

Reply to one of your classmate's posts and include the following in your reply. If possible, please choose a classmate who has not yet received a reply.

1. Identify a benefit or risk of genetic testing that another student wrote about that you had not thought of.
2. Comment on your classmate's explanation for why they would/would not want to have their genome tested.

Classmate: Artlet Morales

1. Some benefits are that I can tell you were a health risk you are exposed to or more likely to get in the future. It can also motivate a person to fix their health in order to not get sick or get the disease they were found likely to get in the future.
2. Some of the risks are that It really can't do much for your health. They can't really tell us accurately if that disease will develop and the results might scare people. For example if it's Alzheimer's there's not really much anything a person can do to not get it in the future.
3. Yes I would like to get my genome tested because I think it's just helpful to know other risks that can damage my health such as diabetes or cholesterol or things that I can manage to change in order to not get it.
