Definition: Acquired immune deficiency syndrome that results from progression of HIV

Prevention: Abstaining, use of protections, avoid sharing sharp objects

Types: AIDS is a result of progression of HIV-1 and HIV-2

Underlying Principles

HIV interferes with one's body to fight the virus hence if no treatment is taken, it leads to AIDS

Weight loss, fever and night sweats as well as recurrent infections are the manifestations of AIDS

No cure for AIDS but it can be overcome by using ARVs regimen.

Nursing Interventions

WHO? WHEN? WHY? HOW?

- Counseling the patient
- Educating the patient and his family on intake of ARVs regimen
- Encouraging the patient to take healthy and balanced diet that are nutritious for the body
- Educating the family on prevention measure when handling their patient
