Definition: Human Immune Deficiency virus caused by a virus that destroys white blood cells

Prevention: Use of protections during intercourse, Abstaining, not sharing sharp instruments include needles

Types: HIV-1 and HIV-2

Underlying Principles

The virus is transmitted through infected blood, semen or vaginal fluids

If not treated, the virus may progress to AIDS

To avoid the risks, strict adherence to antiretroviral regimens is required

Nursing Interventions

WHO? WHEN? WHY? HOW?

- Ensuring the patient takes the prescribed medication regimen without skipping
- Assessing proper nutrition of the patient
- Educating the patient on preventive measures
- Ensuring proper counseling of the patient to avoid stigmatization
