Definition: it is blood purification to a person whose kidney is not working normally

Prevention: Proper intake of fluid especially water, regular exercise, avoiding excess obesity, avoiding excess salt in diet

Types: Peritoneal dialysis

Underlying Principles

Sometimes an increased risk of diabetics and high blood pressure when this occurs

It results when there is decreased kidney function to a critical level

Nursing Interventions

WHO? WHEN? WHY? HOW?

- Assessing circulation of the patient
- Ensuring proper administration of heparin
- Determining the amount of fluid to be drained out during the dialysis
- Monitoring blood pressure of the patient
