THE PRINCIPLES OF AN EFFECTIVE ADDICTION

TREATMENT APPROACH

- 4 1 Addiction is a complex but treatable disease that affects brain function and behavior.
- 4 No single treatment is right for everyone.
- 4 People need to have quick access to treatment.
- 4 Effective treatment addresses all of the patient's needs, not just his or her drug use.
- 4 Staying in treatment long enough is critical.
- 4 Counseling and other behavioral therapies are the most commonly used forms of treatment.
- 4 Medications are often an important part of treatment, especially when combined with behavioral therapies.
- 1 Treatment plans must be reviewed often and modified to fit the patient's changing needs.
- 4 Treatment should address other possible mental disorders.
- 4 Medically assisted detoxification is only the first stage of treatment.
- 4 Treatment doesn't need to be voluntary to be effective.
- 4 Drug use during treatment must be monitored continuously.
- 4 Treatment programs should test patients for HIV/AIDS, hepatitis B and C, tuberculosis, and other infectious diseases as well as teach them about steps they can take to reduce their risk of these illnesses

HOW INDIVIDUAL TREATMENT PLANS (ITP)

APPROACH WILL HELP CLIENTS CHANGE

Each patient's individual treatment plan is tailored to meet the unique needs of each patient and his/ her family. The treatment plan is developed in a manner that it challenges the clients to work through their issues, create healthier lives and make appropriate choices, which honor themselves. Besides ITP help to identify problems, invent solutions, evaluate progress, and prepare to re-enter communities. Each client will receive intense individual treatment sessions at a minimum weekly and more often as needed per the patients Individual Treatment Plan.

WHAT STEPS WILL BE INCLUDED IN THIS APPROACH

- 1. Goals (or objectives):** Every good treatment plan starts with a clear goal (or set of goals). Identify what your client would like to work on and write it down.
- 2. Active participation:** A treatment plan then follows up with how each party will work to achieve the goal(s).
- 3. Support:** Another aspect of treatment planning that is so often forgotten in private practice settings is the client's support system.
- 4. Outcomes:** The last important aspect of the written plan is the outcomes, or success. Make sure to write these down at various intervals.
- 5. Client involvement:** This is the most important step to effective treatment planning. Involving your clients is crucial. Without their feedback, your treatment plan is no more meaningful than a term paper with a bunch of words on it.

STRATEGIES WILL YOU USE TO DEVELOP AN ENVIRONMENT FOR CHANGE

I will use environmental strategies to change the conditions within a community, including physical, social, or cultural factors that may lead to substance use. For example, prevention planners may decide to target laws or norms that are favorable towards alcohol misuse or illegal substance use. Environmental strategies are most effective when implemented as part of a comprehensive approach. Environmental strategies include communication and education strategies, which seek to influence community norms by raising awareness and creating community support for prevention. Environmental strategies may also use enforcement methods to deter the use of illegal substance.

HOW GOALS AND OBJECTIVES WILL BE MEASURED

In treatment, it is vital to keep score of how you are doing. It is the only way in which you will know whether treatment is working. Feelings, thoughts, and behaviors need to be counted. The staff can count them, or the patient can count them. Thoughts and feelings, being internal states, must be recorded by the patient. Behaviors can be recorded by the patient or by the staff. Patients and the staff will record feelings, thoughts, and behaviors and keep a log of these data. The log of the staff is called the patient record or the chart.
