

Ethical research is vitally important to the safety, health, and rights of research participants. Consider a past psychological research study that *would have* violated one or more ethical standards in the current [APA Code of Ethics](#). Briefly recap the research and then discuss the ethical issue by referring to specific standards in the APA Code of Ethics. Remember, as you discuss these lapses, the research may have been done before the Code of Ethics existed or was in the shape it currently is. Here are a couple articles that talk about a few problematic studies... use these to start your search: [Ticheloven](#) [.and Willems \(2013\)](#) and [Youngpeter \(2008\)](#)

:Instructions

Discussion board *primary posts* should be well written, using college level writing and vocabulary, properly referenced (using both in-text citations and full references at the end of the post) using *scholarly or academic sources*, and should be at least 300 words in length (not counting quoted material or references). There should be at least one reference to an academic or scholarly source to support statements made. References should be in appropriate APA formatting standard (except that hanging indents are not required since Canvas does *not* do those

At least two responses to fellow students' posts are also required. Two additional responses can earn two points of extra credit each. Responses to peers should be substantive (discussing the topic, not going off on unrelated tangents or simply being a litany of compliments) and at least 100 words in length (again, not counting quoted material or references, if
