Special Topics in  
Assessment

01

Introduction to  
Individual  
Differences

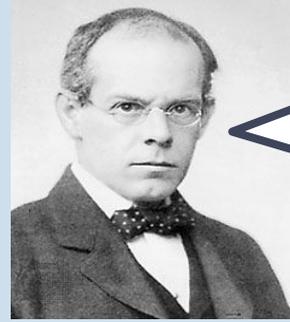

The image features a central light blue speech bubble containing text, surrounded by numerous colorful, stylized illustrations of diverse people in various poses and outfits. The people are depicted in a flat, modern art style with a limited color palette of oranges, reds, blues, and browns. They are shown in various dynamic poses, some walking, some jumping, some standing, and some interacting with each other. The background is plain white.

# Individual Differences!

“Dissimilarities between or among two or more people.”

# Some History

Remember  
me from  
chapter 1?

- Background
  - 1890 - Cattell & concept of “mental test”
  - Mental test - instrument designed to measure a subject’s ability to reason, plan, and solve problems
  - Differential psychology - study of individual differences

## Reminder:

Goals in identifying useful individual differences

### Reliable

- Consistently measured
- Consistent over time

### Construct Valid

- Correlated with what it should be (convergent validity)
- Not correlated with what it shouldn't be (discriminant validity)
- Criterion related validity

# FUNDAMENTAL ASSUMPTIONS IN APPLYING INDIVIDUAL DIFFERENCES MODEL

- Adults have a variety of attributes that are relatively stable over a period of time
- People differ with respect to those attributes
- Relative differences among people on these attributes remain even after training
- Different jobs require different attributes
- These attributes can be measured

# TODAY'S INDIVIDUALS DIFFERENCES

## Knowledge

collection of discrete, related facts & information about a particular domain

## Skills

practiced act or the capacity to perform specific task

## Abilities

stable capacity to engage in a specific behavior; often not directly observable

## Other Characteristics

interests, personality, etc.

02

# Human Attributes

# COGNITIVE ABILITY

“Involves ability to reason, plan, solve problems, comprehend complex ideas, & learn from experience.”

- The Old Way
  - Intelligence Quotient (IQ)
- The New Way
  - Spearman's g
  - Fleishman's s
  - Cattell's theory
    - Crystallized intelligence
    - Fluid intelligence

Also known as intelligence, general mental ability (GMA), cognitive ability, intellectual capacity

# CARROLL'S HIERARCHICAL MODEL

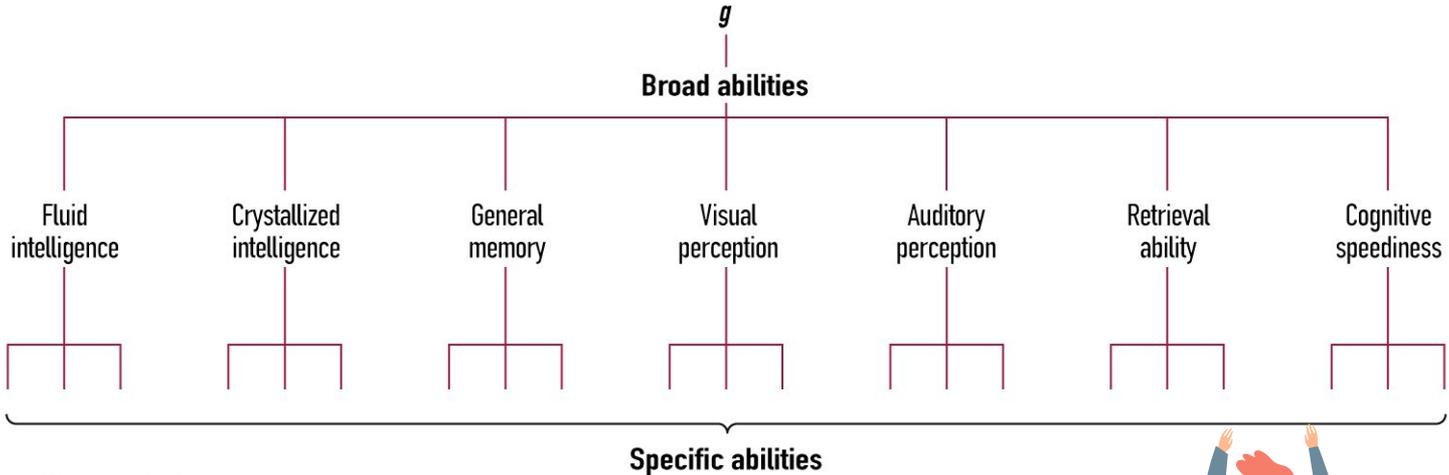

Figure 3.2  
Carroll's  
Hierarchical Model  
Source: Carroll (1993).

# 'G' AND TIME

## At the Individual Level

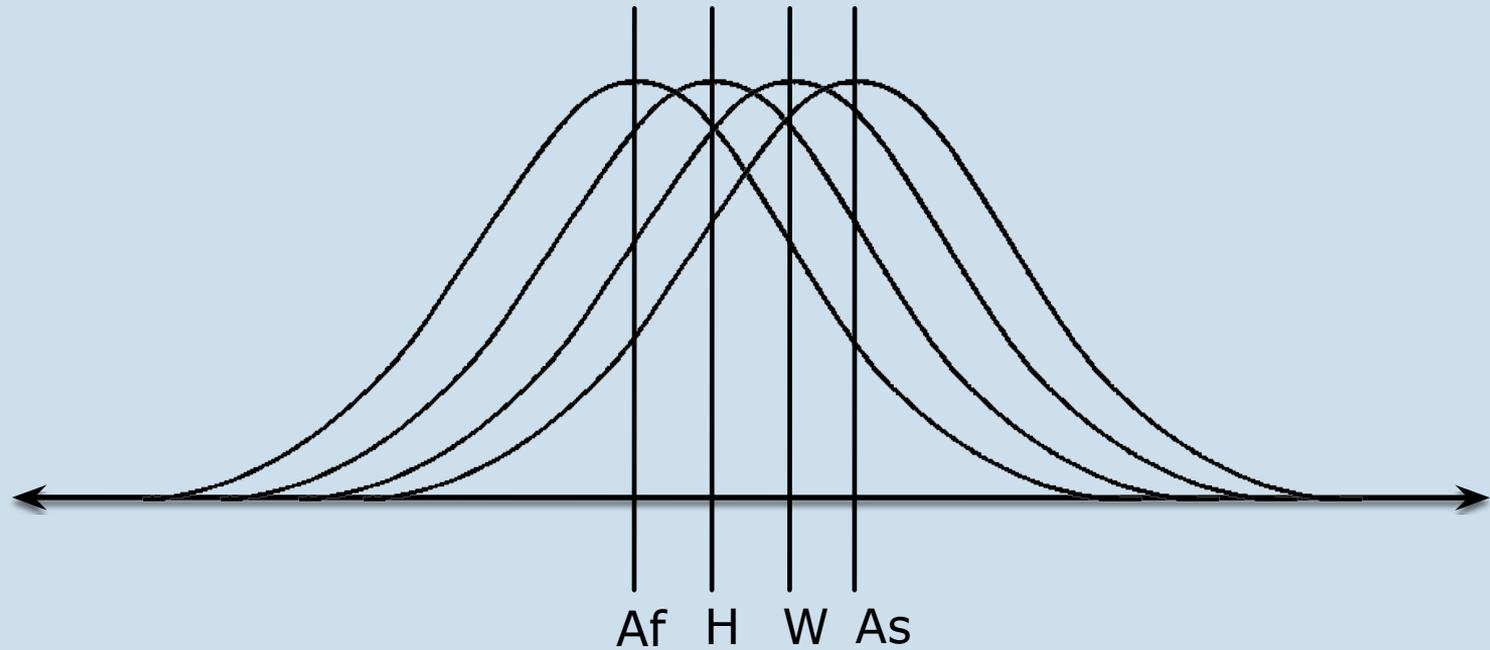

- Gradually decreases as we age (roughly 0.5 IQ pt / year)
- Fluid intelligence decreases while crystallized intelligence increases

## At the Group Level

- Gradually increases with new generations
- The Flynn Effect (+ 1 SD)

# RACIAL DIFFERENCES & 'G'

# COGNITIVE ABILITY TESTS (CONT'D)

- Is “g” important at work?
  - “Yes”, g predicts performance across many jobs
  - ↑ job complexity = ↑ predictive value of general intelligence tests
  - Pros:
    - 85 years of research shown GCA (g) to be best predictor of future performance and learning/training ( $r = .51$ ; Schmidt & Hunter, 1998)
    - Lowest costs & most research & theory
  - Cons:
    - Adverse impact

# 'SUPPLEMENTAL TYPES' OF INTELLIGENCE

- Emotional Intelligence (EQ)
  - “The ability to perceive and express emotion, assimilate emotion in thought, regulate emotion in self and others”
- Example items
  - “I almost always know exactly how I’m feeling”
  - “The variety in human beings makes life interesting”
  - “I try to think good thoughts no matter how badly I feel”
- Is this intelligence?

**Interesting Read:** Does leadership need emotional intelligence?  
(Antonakis, Ashkanasy, & Dasborough, 2009)

# PHYSICAL ABILITIES

- Physical abilities
  - Muscular strength
    - How much?
- Cardiovascular endurance
  - How long?
- Movement quality
  - How well?
- Use in organizations

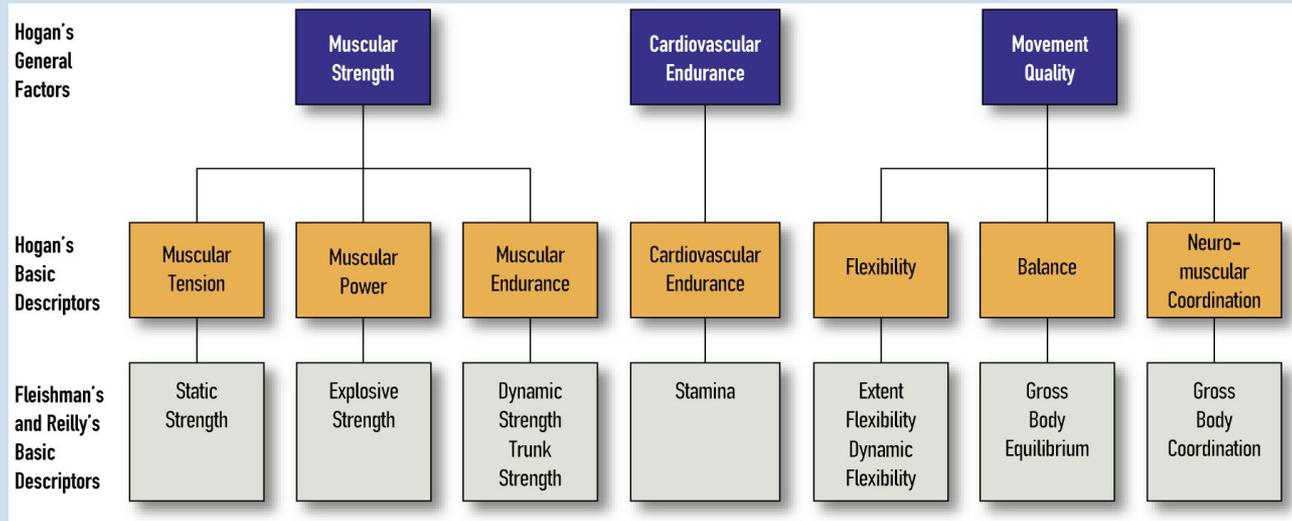

**FOR WHAT JOBS  
MIGHT PHYSICAL  
ABILITY BE  
IMPORTANT?**

# A MODEL OF PHYSICAL ABILITIES

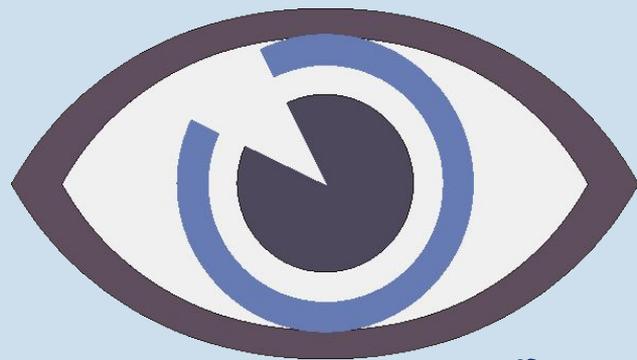

**Figure 3.3:** A Model of Physical Abilities  
SOURCE: (Guion, 1998)

# SENSORY ABILITIES

- Vision
- Touch
- Taste
- Smell
- Hearing
- Kinesthetic feedback
  
- Use in organizations

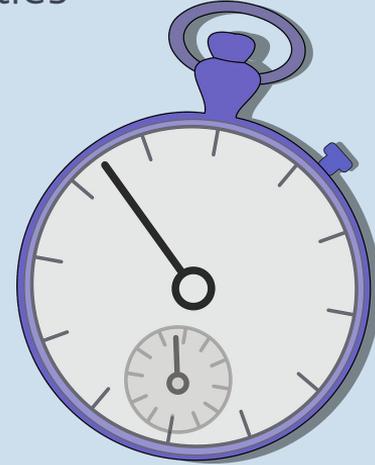

**FOR WHAT JOBS  
MIGHT SENSORY  
ABILITIES BE  
IMPORTANT?**

# PSYCHOMOTOR ABILITIES

- Also called sensorimotor or motor abilities
- Fleishman's psychomotor abilities
  - Arm-hand steadiness
  - Manual dexterity
  - Finger dexterity
  - Control precision
  - Response orientation
  - Rate control
  - Reaction time
  - Wrist-finger speed

**FOR WHAT JOBS  
MIGHT  
PSYCHOMETRIC  
ABILITIES BE  
IMPORTANT?**

# KNOWLEDGE

- Labels, facts, rules, procedures, plans, or goals pertaining to objects, events, processes, conditions, goals, objectives, or the self (Campbell, 2001)
- Several proposed structures
  - Cognitive psychology
    - Declarative knowledge and procedural knowledge
  - Sternberg
    - Academic and tacit knowledge
- Use in organizations

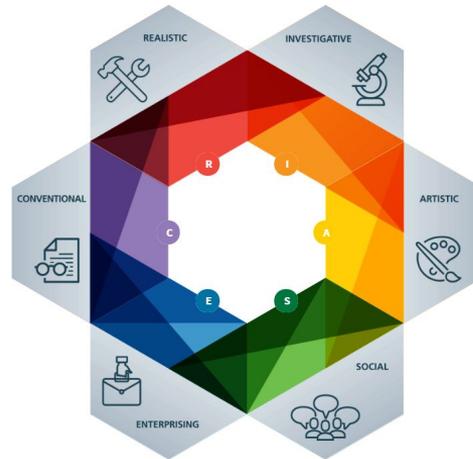

# SKILLS

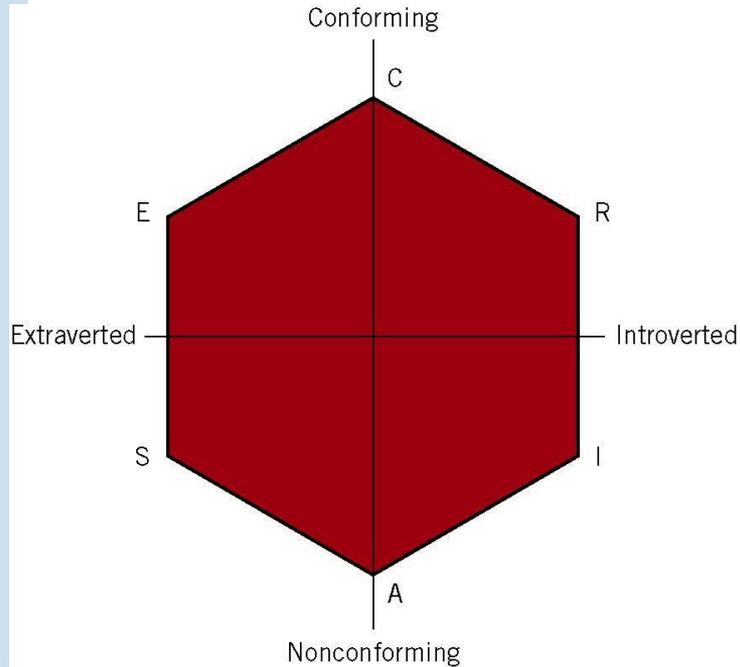

- Two major categories
  - Observable skills
    - Application of knowledge to solve a specific problem with a known solution
  - Problem solving skills
    - Application of knowledge and observable skills to solve problems without a known solution
- Use in organizations

# VOCATIONAL INTERESTS

- One of the oldest individual difference measures
- Tendency to enjoy particular surroundings or activities
- Holland's vocational typology tends to dominate this entire area
  - Realistic
  - Investigative
  - Artistic
  - Social
  - Enterprising
  - Conventional

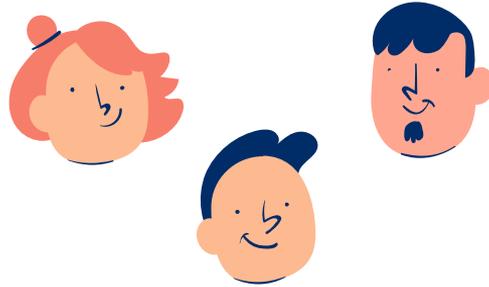

# HOLLAND'S VOCATIONAL TYPOLOGY

**Figure 3.4**  
Interest Types  
Underlying the Hexagonal  
Representation of Holland's  
Vocational Typology  
Source: Hogan & Blake  
(1996).

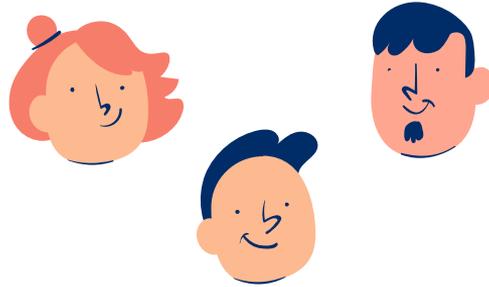

- Do vocational interests predict (1) academic performance or (2) job performance?
- Nye, Su, Rounds, & Drasgow (2012) conducted a meta-analysis
  - Interest score & academic performance,  $\rho = .23$
  - Interest match & academic performance,  $\rho = .32$
  - Interest score & job performance,  $\rho = .20$
  - Interest match & job performance,  $\rho = .36$

# PERSONALITY

- Current major focus in I/O
- Generally, a relatively stable set of characteristics, tendencies and traits (not states)
- Why does this matter?
- Many potential personality traits

# PERSONALITY

- Personality interacts with the situation to influence behavior
- Personality can help predict job performance
- Measurement of psychopathology vs. normal personality

# PERSONALITY MEASURE DEVELOPMENT

Empirically-derived

- Items written first, no cohesive theory
- Hathaway's Minnesota Multiphasic Personality Inventory (MMPI)

Theoretically-derived

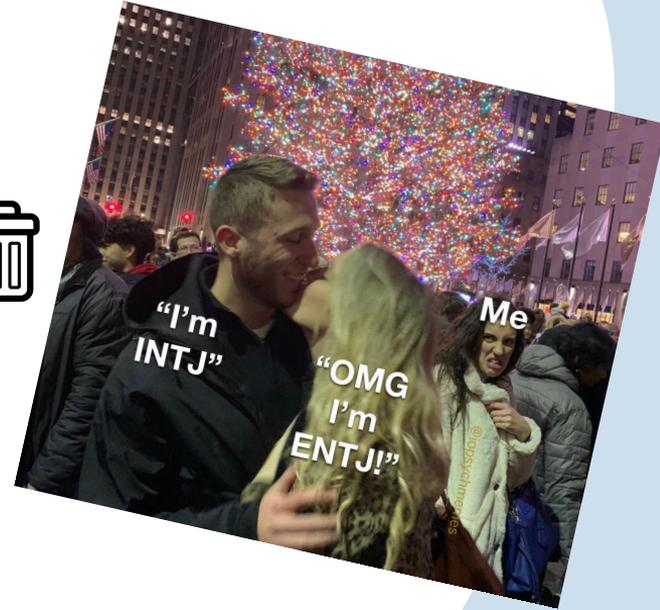

- Myers-Briggs Type Inventory (MBTI)

Rational or Trait approach

- Organizes personality into a hierarchy
- Big Five / Five Factor Model

Costa & McCrae, Goldberg

# THE FIVE FACTOR MODEL (FFM)

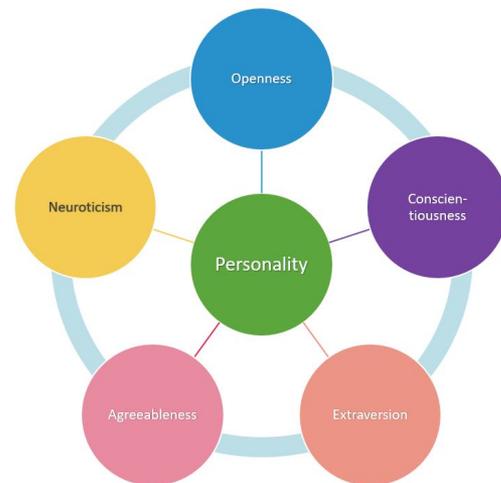

- Five Factors and their respective Facets:

- “OCEAN”

- Openness to Experience
- Conscientiousness
- Extraversion
- Agreeableness
- Neuroticism / Emotional Stability

- (Mostly) Universal, cross-cultural hierarchy

- HEXACO
- H = Honesty- Humility

# OPENNESS TO EXPERIENCE

- Those high in openness tend to be more curious, imaginative, playful, and artistically inclined than others.
- Facets
  - Fantasy, Aesthetics, Feelings, Ideas, Actions
- Example Item
  - I spend time reflecting on things. (+)
  - On a vacation, I prefer to go back to a tried and true spot. (-)

# CONSCIENTIOUSNESS

- Favors organization, dependability, and achievement-orientation.
- Facets
  - Competence, Order, Dutifulness, Achievement-Striving, Self-Discipline, Deliberation
- Example Item
  - I am exacting in my work. (+)
  - Over the years I've done some pretty stupid things. (-)

# EXTRAVERSION

- Sociability of an individual
- Facets
  - Gregariousness, Activity, Excitement-Seeking, Positive Emotions, Assertiveness
- Example Item
  - I am dominant, forceful, and assertive. (+)
  - I often feel uncomfortable around others. (-)

# AGREEABLENESS

- The degree of courtesy, trusting, cooperation, and tolerance a person exhibits.
- Facets
  - Straightforwardness, Modesty, Altruism, Compliance, Trust
- Example Items
  - I sympathize with others' feelings. (+)
  - I am not interested in other people's problems. (-)

# NEUROTICISM / EMOTIONAL STABILITY

- Neurotic individuals tend to lack emotional adjustment
- Facets
  - Anxiety, Anger, Depression, Vulnerability, Impulsiveness
- Example Item
  - I get upset easily. (+N/-ES)
  - I am relaxed most of the time (-N/+ES)

# FFM TEST CHARACTERISTICS

- Reliability
  - Generally high:  $\alpha = 0.8-0.9$
- Valid
  - Barrick & Mount (1991)'s meta-analysis of criterion-related validity
    - Conscientiousness - job performance = .22
    - Extraversion - training performance = .26
    - Openness - training performance = .25
    - Others - both =  $\sim .00$
  - Compound traits

# FFM TEST CHARACTERISTICS

- More Barrick & Mount (1991)
  - Conscientiousness criterion-related validities
    - Job performance = .22
    - Training performance = .23
    - Productivity = .17
    - Salary = .17
  - Consistently valid predictor across all occupational groups studied and all criterion types
- Hurtz & Donovan (2000) expanded
  - Agreeableness & neuroticism predict contextual performance

A vibrant illustration featuring a central light blue rounded rectangle containing the text "Your Personality". Surrounding this central element are numerous stylized human figures in various poses and outfits, representing a diverse group of people. The figures are scattered across the white background, some appearing to be in motion or dancing. The color palette is bright and varied, including oranges, blues, yellows, and reds. The overall style is modern and inclusive, emphasizing individuality and diversity.

# Your Personality

# INTEGRITY

- Quality of being honest, reliable, and ethical
- Overt measures
  - E.g., How often have you arrived at work under the influence of alcohol?
  - Predict overall job performance better
- Personality-based measures
  - E.g., Are you a risk taker?
  - Predict CWBs better
- Concerns about faking

# PERSONALITY & FAKING

## Occurrence

- In the lab
  - The “fake good” and “fake bad” methods
- In the field
  - High-stakes testing
  - Hard to detect

## Detection

- Lie detection scales
  - Overt vs. personality-based integrity testing
- Effect on Validity

## GROUP DISCUSSION

Consider the job of “superhero.”  
Which of these individual  
differences are relevant to this  
job?

# 03

## Foundations of Assessment

# WHAT IS A TEST?

- Objective & standardized procedure for measuring a psychological construct using a sample of behavior
  - Attributes to be assessed → CONTENT
  - Ways to assess attributes → PROCESS

# WHAT IS A TEST

- What is the meaning of a test score?
  - Norming & norm groups used to interpret and give meaning to a score
- Test users & test interpretation
  - Importance of training test administrators to correctly understand & interpret results
- Test battery
  - Collection of tests assessing variety of different attributes

# ADMINISTRATIVE TEST CATEGORIES

- Speed vs. power tests
  - Speed tests have rigid & demanding time limits
    - Provide greater variability among candidates
    - Issue of relevance to job
    - May increase the risk of legal challenges
  - Power tests have no rigid time limits
    - Questions answered correctly by a smaller percentage of test takers

# ADMINISTRATIVE TEST CATEGORIES

- Group vs. individual tests
  - Individual tests useful in assessing a candidate's style of problem solving
  - Group testing is valuable in reducing costs
- Paper & pencil vs. performance tests
  - Performance tests assess skill in performing tasks & knowledge of how to carry out actions

# TESTING & CULTURE

- Bias
  - Situation in which a given test results in statistical errors of prediction for a subgroup
- Fairness
  - Value judgment about actions or decisions based on test scores

04

# Assessment Procedures

# COGNITIVE ABILITY TESTS

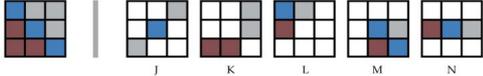

- Allow individuals to demonstrate what they know, perceive, remember, understand, or can work mentally
- Includes problem-solving, perceptual skills, developing or evaluating ideas, and remembering what one has learned

# COGNITIVE ABILITY TESTS (CONT'D)

- Tests that produce a single score
  - e.g., Wonderlic Personnel Test (WPT) - 50 items to assess verbal, numerical, and spatial abilities
    - 12 minute administration (speed test)
    - High reliability and strong correlations with other, more elaborate, intelligence tests
    - Used by the NFL

Wonderlic W P T - R Sample Questions wpt

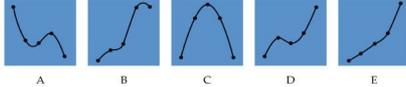

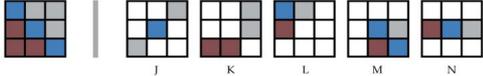

1. Which of the following is the earliest date?  
A) Jan. 16, 1898 B) Feb. 21, 1889 C) Feb. 2, 1898 D) Jan. 7, 1898 E) Jan. 30, 1889
2. **LOW** is to **HIGH** as **EASY** is to **?**  
J) **SUCCESSFUL** K) **PURE** L) **TALL** M) **INTERESTING** N) **DIFFICULT**
3. A featured product from an Internet retailer generated 27, 99, 80, 115 and 213 orders over a 5-hour period. Which graph below best represents this trend?  
  
A B C D E
4. What is the next number in the series? 29 41 53 65 77 ?  
J) 75 K) 88 L) 89 M) 98 N) 99
5. One word below appears in color. What is the **OPPOSITE** of that word?  
She gave a **complex** answer to the question and we all agreed with her.  
A) long B) better C) simple D) wrong E) kind
6. Jose's monthly parking fee for April was \$150; for May it was \$10 more than April; and for June \$40 more than May. His average monthly parking fee was ? for these 3 months.  
J) \$66 K) \$160 L) \$166 M) \$170 N) \$200
7. If the first two statements are true, is the final statement true?  
Sandra is responsible for ordering all office supplies.  
Notebooks are office supplies.  
Sandra is responsible for ordering notebooks.  
A) yes B) no C) uncertain
8. Which THREE choices are needed to create the figure on the left? Only pieces of the same color may overlap.  
  
J K L M N
9. Which THREE of the following words have similar meanings?  
A) observable B) manifest C) hypothetical D) indefinite E) theoretical
10. Last year, 12 out of 600 employees at a service organization were rewarded for their excellence in customer service, which was ? of the employees.  
J) 1% K) 2% L) 3% M) 4% N) 6%

Answers: 1. E, 2. N, 3. D, 4. L, 5. C, 6. M, 7. A, 8. KLM, 9. CDE, 10. K

# COGNITIVE ABILITY TESTS (CONT'D)

- Tests of specific abilities
  - e.g., Bennett Test of Mechanical Comprehension
  - Other tests measure perceptual accuracy, memory, spatial relations, etc.
- Cognitive test batteries
  - Collection of tests that assess a variety of cognitive aptitudes or abilities
    - General Aptitude Test Battery (GATB)
  - Federal government uses in selection
    - Armed Services Vocational Aptitude Battery (ASVAB)

Wonderlic W P T - R Sample Questions wpt

1. Which of the following is the earliest date?  
A) Jan. 16, 1898 B) Feb. 21, 1889 C) Feb. 2, 1898 D) Jan. 7, 1898 E) Jan. 30, 1889

# PHYSICAL ABILITY TESTS FOR FIREFIGHTERS

*Stairway climb:* Candidate wears fire-protective clothing and air tank and carries seven pieces of equipment up three flights of stairs, one piece at a time. Each piece of equipment weighs between 25 and 55 pounds.

*Hose pull:* Candidate wears air tank, stands in one spot, and pulls 50 feet of fire hose filled with water using a hand-over-hand technique.

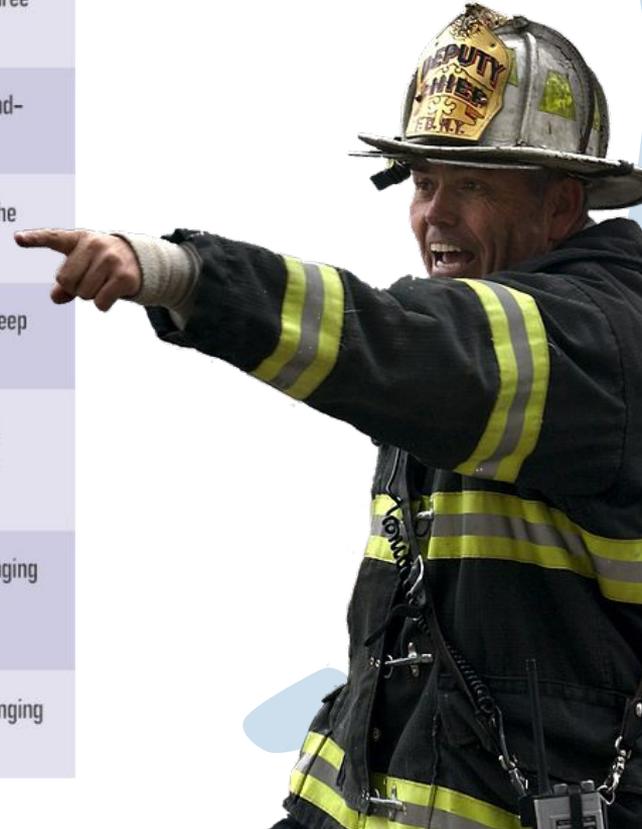

*Ladder pull:* Candidate wears air tank and pulls a 16-foot ladder from the ladder bed of a fire truck, places it on the ground, picks it back up, and replaces it in the ladder bed.

*Dummy drag:* Candidate drags a 125-pound sandbag around a serpentine course of 40 feet. The candidate must keep one knee in contact with the ground and may not lift or carry the sandbag but must drag it.

*Blind crawl:* Candidate wears fire-protective clothing and an air tank. After putting on a blackened face mask, the candidate must crawl through a plywood maze that has several turns in it. In addition, there are sandbags located strategically throughout the maze. The maze is approximately 40 feet in length.

*Pike pole:* Candidate wears an air tank and alternately pulls and pushes a 75-pound weight attached to a pole hanging from a frame. The candidate must complete as many repetitions as possible in a 4-minute period. A repetition is defined as one push and two pulls.

*Fan hang:* Candidate wears fire-protective clothing and an air tank and lifts a 50-pound fan from ground level, hanging it on a standard door frame.

# TESTING METHODS

A

Interview

B

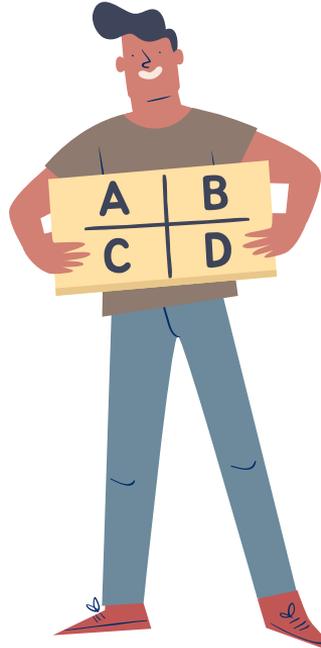

Assessment Center

C

Work Samples

D

Situational  
Judgement Test

*Interview*

# JOB INTERVIEWS

- How effective is your “typical” job interview at identifying (i.e., predicting) the best candidates?
  - A = Highly Effective
  - B = Effective
  - C = Ineffective
  - D = Highly Ineffective
- **A = True/B = False** - “I am good at reading people, give me 10 minutes with a person and I’ll tell if you they’d make a good candidate to hire.”

*Interview*

# INTERVIEW

- Tend to cover job knowledge, abilities, skills, personality, & person-org. fit
- Structured vs. Unstructured Interviews
  - Structured interviews have higher validity
  - Unstructured interviews tend to be preferred by hiring managers
- Situational vs. Behavioral Interviews
  - Situational: what would you do if...
  - Behavioral: what did you do when...

# ASSESSMENT CENTERS

- Collection of procedures used for evaluation, often for possible promotion
- Typical characteristics
  - Assessment done in groups
  - Assessment done by groups (i.e., assessors)
  - Multiple methods of assessment employed
  - Assessment centers have “feel” of relevance

*Assessment  
Centers*

*Work Sample*

# WORK SAMPLE TESTS

- Measure job skills by taking samples of behavior under realistic, job-like conditions
- Examples:
  - Rudder control test for pilots
  - Speech interview for foreign student

## *Situational Judgement Test*

# SITUATIONAL JUDGMENT TESTS

- Present candidate with written scenario, then ask candidate to choose best response from series of alternatives
- Important characteristics:
  - Job-related
  - Well-accepted by test takers
  - Reduced adverse impact compared to other devices

05

Special Topics in  
Assessment

# BIODATA

- Biodata
  - Includes type of information collected on an application blank
    - e.g., previous jobs, education, & special training
- Ecology model
  - Events constituting person's history represent choices made by individual to interact with his/her environment

# GRADES & LETTERS OF RECOMMENDATION

- May be able to predict job offers, but not job success
- Little serious research on validity & fairness of these devices

# COMPUTER-BASED ASSESSMENT

- Are we measuring the same thing we do with paper & pencil test or interview?

Yes AND No

- Personality tests - YES (Salgado & Moscoso, 2003)
- SJT, biodata, and personality - YES (Ployhart et al., 2003)
- g - generally yes, unless test is speeded
- Computer-based testing puts limits on test-taking “style”
  - Sometimes can’t go back and forth
  - Screen may only display one or two items

# INTERNET-BASED TESTING

- Can be expensive - more useful for organizations that screen a large number of applicants
- Unproctored - concerns about faking and cheating
  - Need to verify answers before hiring

# INTERNET-BASED TESTING

- Who is the a candidate
  - Individual submits expression of interest in employment
  - Employer considers individual for employment
  - Individual possesses basic qualifications for the position
  - Individual does not withdraw from further consideration
- Computer Adaptive Testing - test identifies test taker's level of ability and only asks questions to further refine ability level

# ROUTING TEST IN COMPUTER ADAPTIVE TESTING

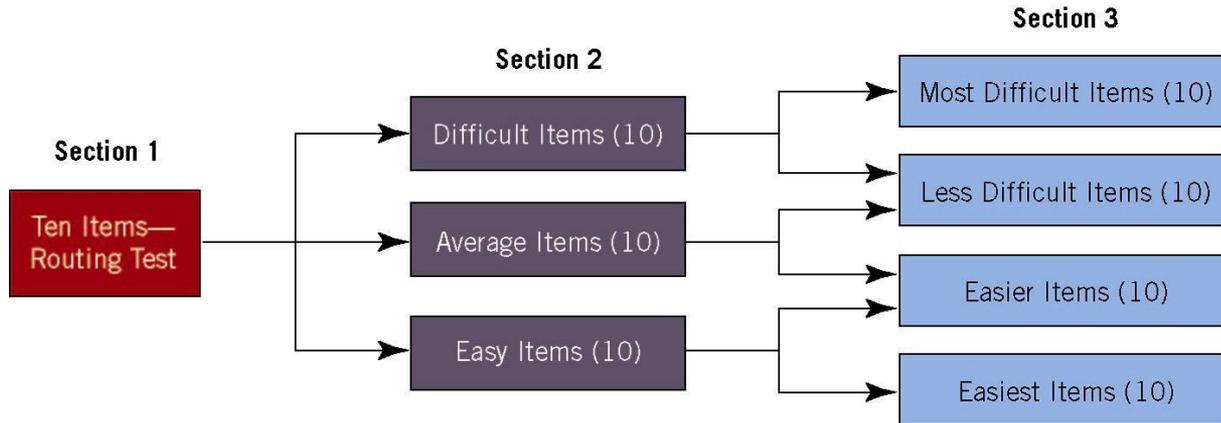

Figure 3.13.

## Social Media?

What do you think about using social media as a measure of individual differences?

# Thanks!

Do you have any questions?

Don't forget... Quiz due Sunday at  
11:59 PM CT
