

Fixes & Prepairs

Aisha S Alasfour, 2020

Troubleshooting and repairs language

- Describe the problem in hand using conditionals, e.g. “if” and “when”.
- Use the imperative form “orders”, modals (e.g. can, should, must), and semi-modals (e.g. have to, need to).
- List the tools and repair parts needed (e.g. wrench, cables, compressor, etc.)
- Avoid lengthy descriptions.
- Use sequencers: before, after, first, second, third, next, after that, etc.
- Provide various solutions whenever possible.
- Explain why the steps are important
- Use simple, yet technical language.

How to fix a car horn

Oral Assessment

- ❑ Pick one of the topics/videos in the next slide to talk about in your assessment.

You can also describe troubleshooting and repairing a machine/device/vehicle of your own choosing (preferably the one you've chosen for your final project).

- ❑ Refer to “Troubleshooting and repairs language” in the second slide.
- ❑ Discuss the fixes with your group members.
- ❑ If your description of a repair or fix is less than four steps, add at least two other repairs to your description. The PS4 controller repair video provides a good example of short repair descriptions.
- ❑ Be ready to present your topic to the whole class.
