

MOT 133 CLINICAL assignment “Meds”:

Choose Any **THREE (3)** of the following diseases (covered in the MOT 133 course chapters).

Depression	Cerebrovascular Accident (CVA)
Alzheimer’s	Epilepsy
Conjunctivitis	Otitis Media
Hyperthyroidism (Grave’s disease specifically)	Pernicious Anemia
Disseminated Intravascular coagulation (DIC)	Hypertension
Rheumatic Heart Disease	Atherosclerosis
Angina Pectoris	Congestive Heart Failure (CHF)

Using a table format (either document or spreadsheet), **research** and **produce a document** giving the following information:

1. Top THREE (3) COMMON medications prescribed for the condition (try to choose different categories especially if they are usually taken in combination with each other to treat the disorder collectively) **and for EACH drug**.....
 - a. Give the GENERIC name **AND** ONE BRAND name
 - b. Tell me the CATEGORY of the drug – type of drug (anti-hypertensive, anesthetic, steroid etc.)
 - c. Tell me the INDICATIONS of the drug – why use this, what does it do?
 - d. Tell me who CANNOT take the drug (contraindications) – keep it to **top two** listed in research – try not to use allergies as a contraindication where possible.
2. Tell me 3 common symptoms of the disorder/disease
3. Tell me 2 other **treatment** options (NOT DRUGS and NOT Prevention) for this disorder
4. Cite any sources on a separate final page as usual APA citations commonly used.

DO NOT USE WIKIPEDIA at any time.

FOR AN EXAMPLE: see page 2.

POINTS: 100 (1/3 of points for each disorder/disease) – all 3 elements of the disorder/disease must be correctly addressed and there must be a correctly formatted citation page for full points.

DISORDER/DISEASE #1. **OSTEOMYELITIS**

Top 3 MEDICATIONS Generic name	Brand name	Category	Indications	Contraindications	3 common symptoms	2 other treatment options
1.Ciprofloxacin	Proquin XR	Fluoroquinolone Antibiotic	Kills bacterial infections	Allergy to all fluoroquinolones or if Taking tizanidine	Fever and chills	Surgery to remove damaged bone
2.metronidazole	Flagyl	Antibiotic	Kills bacterial infections but not vaginal yeast infections	Taken Antebuse in the last 2 weeks or Not in first trimester of pregnancy	Inability to use affected limb	Debridement/drainage of necrotic tissue or abscesses. Clean wound and replace dressings regularly if applicable
3.Nafcillin	Nallpen	Penicillin Antibiotic	Kills staphylococci bacterial infections	Allergy to all penicillins Or Asthma Or Renal dysfunction	Redness and swelling of affected area	

DISORDER/DISEASE #2. Etc.

THEN a citation page for the sources you used (don't have to be specific webpages each time) – example you went to RXlist.com several times, just put in ONE of the citations for one of the drugs in APA format. Don't have to put them all in, but put that one COMPLETE citation in correctly. Then you went to Medscape for another part of the table, put that citation in completely and correctly.

ACC Library resources can help you with citations in APA format. The following link is on the ACC library area with many other citation sources:
