

ECO 302/HW3, Fall 2019; **Instructor:** Professor Emin Gahramanov.

Due date of the assignment: 3:10 PM, November 27, 2019

Note: This assignment has 100 points maximum. Please avoid “mechanical errors”, or else you will lose points. Draw all the graphs *professionally* (not by hands!), and label them properly. Strictly adhere to the word/space limit to avoid losing points. If your hand-writing is hard to read, I will subtract points. You should write *strictly* within the corresponding boxes drawn below. Please also be aware of the plagiarism and illegitimate collusion policies of the University. Please provide your credentials below.

Name:

ID:

Question.

Carefully study the paper by Viana and Cunha (2016) on “the Swedish Economic Model” (a link is in the syllabus). Challenge the study’s assumptions, statements, and presented results. Your objective is to be a critical and shrewd referee of the *authors’* views, statements, and findings. Base your critique on actual evidence and clear logic, rather than vague references to alternative views. The task is not to criticize irrelevant/minor points, but to refute their main conclusions and key statements. To do so, using actual data is essential. Reference your data sources clearly, present them as tables/diagrams in appendices to this homework. Raw data used should be included in appendices too. [Use maximum twenty-five short sentences in your explanation] **(100 points)**
