I have chosen Los Angeles as my city. It is a city well known for its initials, which are abbreviated as L.A. Los Angeles is the capital as well as the largest city in California. It has a population which is approximated to be about 4 million people. Moreover, Los Angeles is the second well-known city in the United States of America, which comes after New York City. Besides, it is the third famous city in North America, which also comes after Mexico City as well as New York City. I have chosen Los Angeles City because of its several factors that have made it emerge among the best and greatest cities we have (Spohn and Tellis, 2012).

To start with, I have chosen Los Angeles because of its Mediterranean climate. It is a city well known for its hot-summer, which consists of dry summers, cool wetter winters as well as hot summers. Besides, its climate is associated with the typically wet-winter pattern and dry-summer, which has low annual precipitation (Paz *et al.*, 2016). Secondly, the ethnic diversity of Los Angeles has been attributed to the reason why I have chosen the city (Kim and White, 2010). Approximately half of the population that makes up Los Angeles is Latino, whereby 11 percent can be simply presented as Asian, whereas 10 percent is made up of Africa-American. According to WalletHub, Los Angeles is ranked in accordance with educational diversity and racial diversity. Los Angeles among the cities that its industry has been largely affected by the cinema of the United States of America, which has made the city to emerge as the best

Hollywood production hence the reason as to why I have chosen it. The home to a genealogically diverse population, Hollywood, and the Mediterranean climate that is balmy has made Los Angeles a sprawling metropolis, thus the reason why I chose to work in the city. Concerning the city, it is my expectation that I will come across many inventions, contributions, and improvements made in Los Angeles as a result of its Mediterranean climate and film technology based on Hollywood. However, I have used some parts of Hutter in my work. For instance, I have used the part of historical development to know how the city developed in the film industry and city people to know people who make up the city with their respective percentage.

I choose issues like historical developments. About this, Hutter says that these historical developments are based on world urbanizations, urban sociology, and social imagination. According to him, the social imagination is mostly concerned with gender, integrating class, ethnicity, and race. All these factors have the ability to influence how people live and interact in a city. On the issue of city people and places, Hutter says people's social behavior is based on the families, gender, and also singles in the city and finally the urban communities.

In the overview, the book deals with most recently urban issues such as sprawl and also sustainability. The future plans of Los Angeles are to stand strong and firm in the film industry and to make more improvements. Through these improvements, Los Angeles will be among the best cities in Hollywood production, something which will be playing a significant role through the creation of employment. With the employment creation, citizens are going to enjoy good living standards, and the well-being of the city will be improved.
