EXAM Grade Vs Final Grade

Frequency Distribution Table

Exam	Final Grade
95.0%	77.0%
57.0%	72.0%
33.9%	70.0%

You will not be able to get an A because you failed your second exam. Even if you get a perfect score, the best you can get is a 77 percent.

Based on the first scenario, it is evident that you will get a 77 percent if you study hard and get a 95 on your third Exam.

Scenario 2 depicts that you will get a 72 percent if you score 12 percent points higher (45%+12%) in Exam 2.

Regarding the third scenario, you can only achieve a least final grade C of 70 percent if you score a 34 percent in your exam.

Weighted Average	
Exams	50%
HW	30%
DB	20%

Since the exams seem to have a greater weight compared to the homework assignments and the DBs, my recommendation to you is to give it your all when approaching your third exam and get a score of 95 percent. Despite of your present scores, it is critical to give it your all to achieve a better grade. You will go far if you have optimism and commitment.
