

LET'S SAVE OUR PLANET

CLIMATE CHANGE PREVENTION

SIMPLE STEPS WITH HUGE IMPACT

CONSERVE WATER.

NOT USING IT? TURN IT OFF!

Water is a scarce resource. We should conserve the available usable water to sustain future generations and also help in agricultural production.

REDUCE YOUR WASTE.

USE, REUSE, AND RECYCLE

Minimizing our wastes by using, reusing, and recycling products will ensure that energy is saved and CO2 emissions are limited.

SAVE AND MAXIMIZE ENERGY

USE ENERGY-SAVING APPLIANCES

Using energy saving appliances like LEDs will lower the amount of energy consumed in the house. Also, it is necessary to unplug appliances when they are not in use. Minimizing cooling and heating will also lower the cumulative amount of energy used.

WALK AND TRAVEL GREEN.

USE PUBLIC TRANSPORTATION, WALK, USE BICYCLES

Using public transportation, bicycles, or walking are alternative ways to move from place to place. They will lower the amount of fossil fuels used, and in turn lower CO2 emissions.

CONSUME LOCAL FOODS

IMPORT LESS AND PURCHASE IN SMALL QUANTITIES

Foods account for large amounts of carbon emitted into the atmosphere. Consuming vegetables and avoiding manufactured foods will lower energy consumption. Also, we should purchase only what we can consume at the moment.

Save water

Save energy

Use local foods

USE PUBLIC TRANSPORTATION
