

Study Analyses

For each of these assignments, find at least two of the specified study type. For the ecologic/case-control/cohort study analysis, please select at least two different study designs. In a paper that is at least three pages in length, discuss and analyze the following

- Methods used, including
 - Recruitment/selection of subjects ✓
 - Data collection process ✓
 - Data analysis process ✓
- Theoretical framework used ✓
- Limitations noted by authors ✓
- Conclusions drawn by authors ✓

Include your own assessment of the conclusions drawn by the studies and whether you agree with them. If the studies come to different conclusions regarding risk factors, protective factors, or potential causes, include your assessment of which is the more valid conclusion and why.

How to compare each other
