

After reading/reviewing *all* of chapters 4, 5 and 6, and viewing/reading the *opinion* pieces in the week 3 module, respond to all of the following:

Choose **ONE specific** topic from two different LOs (learning objectives) from *each* chapter. (a total of 6 topics/LOs). And then choose **TWO *opinion prompts*** to respond to (you may do more than one if you like, but two is the minimum). So, you have a total of 8 responses this week.

1.

At minimum, **one** of your LO choices must represent a specific psychologist's theory (e.g. Vygotsky's *Zone of Proximal Development*, Kohlberg's *Stages of Moral Development*, etc). The other 5 topics is up to you! The broader learning objective categories are: **physical/cognitive/psychosocial** development in early, middle and late childhood development. Summarize each topic and as usual, briefly state why you found it interesting.

2.

Opinion prompt #1: Specifically, I'd like to know your thoughts on the ethics and potential impacts to a child who was involved in such an experiment (if you believe there to be any).

3. **Opinion prompt #2:** Please summarize your reaction to the article in Box 4.2 (and figure 4.25) "Imaginary Companions"

4.

Opinion prompt #3: What is your opinion on organized sports for middle childhood ages? Make sure you have thoroughly read the section on "Sports" from chapter 5 (pages 154-156 if you have a printed copy of the text) that spotlights reasons children tend to drop out or stop playing.

Respond to a minimum THREE other classmates this week. One of your replies must be in response to a specific LO, and at least one other, a reply to an opinion piece.
