

Lab 9 – Exceptions and Files

Exercise 1

Create a file named A9.java. Place all your code in this file.

Write a static method in the public class A9 named readSecondLine that takes as input a String path and returns a String. Your method should read from the file at the specified path and start reading line by line. It should return the second line.

Note: You must still close your file! There are two ways to ensure you close your file after returning.

- 1) Try with resources
- 2) Close the file in the finally – finally is called even if you return inside the try.

Note: When a method fails to return the correct object, you can return null at the end.
