

MOT 135: PAPER INSTRUCTIONS:

General Websites are NOT ALLOWED to be used - Wikipedia – WebMD – Mayo Clinic, YouTube, Medicinenet, or other medical websites.
Points will be deducted for using them. See below for further instructions on this.

Write a 3 page research paper

Choose 1 (one) of the following topics:

1. Write about Lymphoma and the different types of cancers of the lymphatic system. Discuss symptoms, tests and treatments of this type of cancer.
2. Write about a COMMON digestive system disorder that is caused by a parasite. Also talk about gut health and how bacteria play such an important role in digestion and health generally.
3. Discuss kidney dialysis. What does it do and what types of conditions is it for? What does a patient have to change in their lifestyle while undergoing dialysis?
4. Discuss how much information you think schools should provide concerning Sexually Transmitted Infections (STIs) to young people. When should the information be provided? I was just reading a report on how STIs in people in their 50's and 60's are growing the fastest amongst any age group. Why is that do you think?
6. Write about diverticulitis and diverticular disease. I work in a large hospital system and these digestive system diseases are very common. Again, discuss how diet is such an important component of diseases of the colon

Aspects that you can include (you may choose which are appropriate for your topic)

- the disease or disorder usual/main symptoms
- drug treatments and other treatments or surgeries or new innovations
- possible outcomes for ignoring the symptoms
- who are the high risks
- population statistics
- tests/diagnostics used to diagnose if any
- **MUST HAVE Your own thoughts on this disease or disorder after research**

SEE SAMPLE PAPER in content and one on MORE>LINKS area, AND GO TO THE Online Writing Lab WEBSITE FOR HELP on what this should look like

Once you have your paper topic decided:

The paper must be:

- **IN YOUR OWN WORDS** (you may paraphrase some research but make sure you cite correctly both in text and in citation page) do not COPY word for word. The idea is that you UNDERSTAND what you read and can summarize **in your own words** what this means to the A&P and disease you are writing about and apply it to the subject.
 - **AT LEAST 3 pages long** (not including a header or citation page) **no more than 5 pages.**
 - (2.0 spacing ONLY, no single)
 - 12 pt font (Times New Roman or Ariel)
 - **Use your own words as much as possible.**
 - Use In text citations or references according to APA or MLA.
 - **CITE ALL SOURCES correctly** on a separate page that does NOT count toward page count.
 - Cite all sources in **either APA or MLA format.** (Research to find out what this is!)
- (10 points deducted for each aspect of formatting or pages that is incorrect)

PLAGIARISM will result in a ZERO point paper and reporting to Student Affairs.

You MUST HAVE at least 3 research resources

Please feel free to consult your text and **credible** sources for research.

Use the **LIBRARY research databases online** (go to LIBRARY link in main website or on course home page in D2L, they are free), or peer reviewed CREDIBLE PROFESSIONAL JOURNALS (NOT newspapers or general issue magazines).

General Websites are NOT ALLOWED to be used - Wikipedia – WebMD – Mayo Clinic, YouTube, Medicinenet, or other general medical websites.

Points **will be deducted** for using them.

Thoroughly research your ideas and structure the paper with intro, body and conclusion.

DRAFT:

Draft version should be **about 1.5 pages long** and contain a draft of your work **and** what you are going to say **and** possibly one or two full paragraphs etc. **A separate citations page should also be part of the draft** (so at least 2.5 pages).

Upload the draft to the DRAFT PAPER section in ASSIGNMENTS area by the due date given.

20 points

FINAL:

Once you have your **final version** all ready, upload it to the FINAL PAPER section in the DROPBOX by the due date given. **80 points**
