

Add the inline assembly `".TOP: \n\t"` in between the following two lines of inline assembly where the arrow points:

```
__asm__(".intel_syntax noprefix\n\t"  
        "mov dl, 'W' \n\t" //move literal ASCII char 'W' into EDX
```

Your code should now have `".TOP: \n\t"` line separating your `".intel_syntax noprefix\n\t"` line and the `"mov dl, 'W' \n\t"` line.

Replace the second-to-last assembly line

`"hlt \n\t"`

with the following command:

`"jmp .TOP \n\t"`
