Contemporary, growth mindset is ideally believed that people's essential ability can be developed through dedication and hard work, creating love and interest in learning for academic achievements (Dweck 22). A growth mindset contrasts with a fixed mindset, where people believe that their intelligence and talents are fixed traits. My essay will focus on strategies that will help me improve my writing through a growth mindset for academic achievements. Ideally, strategies like viewing challenges as opportunities, using different learning tactics, and acknowledging and embracing imperfection will help me have a growth mindset for my learning.

Notably, an "A" grade is achieved through determination, effort, and hard work towards the task. Therefore, to overcome poor grades below "A," I will apply my growth mindset strategies of applying new tactics in learning and view my challenges as an opportunity to improve my grade. For instance, if I earn a low grade from my writing, I don't have to blame my professor, but lather takes it as an opportunity to improve. In this case, I need to identify areas where I went wrong, rectify my mistakes, and create interest in learning for self-improvement (Rattan et al 723).

Arguably, if I am not a grade "A" student and I fail the paper, I will use the strategy of replacing the word fail with learning. These will help me improve my paper since I have learned my mistakes and improved on them. Therefore these strategies will help in improving my learning for the semester. According to (Robinson 18) consultation from the teacher and writing tutors will also help me gain new skills and knowledge in my writing. Ideally, learning is a process of gaining new skills and knowledge through experience, study, and teaching. Therefore, I need to be keen on acquiring new skills, listening to the teachers, and gaining experience that will help me improve my grade.

As I sum up, success is gained through dedication and hard work towards a task. Therefore, one needs to have a growth mindset that will help in handling more challenging assignments.

Replacing failure with learning will help one handle more challenging assignments since the task can be repeatedly re-done for improvements. Finally, if one gets lower grades than expected, it would put more effort into the improvements. Different learning tactics can be used as group discussion, reaching, using different books for revision, and doing continuous assessments that will help in improving the grades.
