What is Maths?

Mathematics is a paramount emanation of the humankind,

Mathematics is everywhere in numbers, shapes, and patterns,

Mathematics is the ideal study of numbers,

Mathematics is the study of how things are organized,

Mathematics is a thing to be valued in and for itself!

Mathematics is full of fun,

Mathematics is full of knowledge,

Mathematics organizes our thoughts,

Mathematics integrates many disciplines,

Mathematics ought to ease our future!

Mathematics is alienated,

With so much to be learned in numbers, shapes, and patterns,

Profits are added, losses are subtracted,

Degrees are multiplied, percentages are divided,

Geometry is a spark of the unknown, algebra tells the story,

Lines are parallel, angles are similar and congruent,

Integers are identical, but they define everything,

Mathematics is essential in life,

Without math, there would be no education,

Without math, there would be no profession,

Without math, life would be a mystery,

It would be difficult to survive!

Mathematics is universal and complicated,

Sometimes things go wrong,

Sometimes the road seems all uphill,

When morale is pressing you down a bit,

Please learn if you must, but do not quit,

Success is a failure turned out,

It may be near when it seems far,

Do not give up when computations seem complicated,

Endurance is the key to mathematics,

Every genius in mathematics is a learner,

Every genius in mathematics is a MATHEMATICIAN!
