Case Study

Preliminary Medical Report

- Jane Smith was stabilized and checked out of the hospital against medical advice (AMA). She was treated for acute opiate poisoning/intoxication.
- The 4 year old child is being treated for dehydration. The child presents as being underweight for age and size. Speech is noticeably delayed. Treated also for a 2nd degree burn on hand that is infected. Ready for discharge.
- The 2 year old child is being treated for dehydration and is showing signs of malnutrition. The child also has a case of severe diaper rash and some apparent bruising on the buttocks.
- The infant is being treated for severe dehydration; skin is pale, unable to grip, unable to track with eyes. There is a scratch on the infant's back approximately 3 inches in length that appears relatively fresh. There is a healing bruise on the infants left thigh.
