
Question 1

1. Consider an experiment of drawing 4 cards at random from a bag containing 7 cards marked with integers from 1 to 7.
 - Find the sample space S_1 of the experiment if the first card is replaced before the second. **(5 points)**
 - Find the sample space S_2 of the experiment if the first card is not replaced. **(5 points)**
2. A ball is drawn at random from a box containing 7 red balls, 5 white balls and 3 blue balls. Determine the probability that it is (a) a red, (b) white, (c) blue, (d) not red, (e) red or white. **(10 points)**

Question 2

A committee of 8 persons is to be selected randomly from a group of 14 men and 10 women.

1. Find the probability that the committee consists of 3 men and 5 women. **(10 points)**
2. Find the probability that the committee consists of all women. **(10 points)**

Question 3

1. 2 cards are drawn from a well shuffled ordinary deck of 52 cards. Find the probability that they are both aces if the first card is
 - replaced **(5 points)**
 - not replaced **(5 points)**
2. From a deck of 52 cards, 3 cards are drawn in succession. What is the probability that the cards drawn are all aces or all jacks? **(10 points)**

Question 4

A lot of 2500 electronic chips contains 50 that are defective. Two chips are selected at random, without replacement from the lot.

1. What is the probability that the first one selected is defective? **(5 points)**

-
2. What is the probability that the second one selected is defective given that the first one was defective? **(5 points)**
 3. What is the probability that they both are defective? **(5 points)**
 4. What is the probability that the second one is not defective given that the first one is? **(5 points)**

Question 5

Consider an experiment of tossing an honest coin repeatedly. Let the random variable (r.v.) X denote the number of tosses requires until the first tail appears.

1. Find the probability mass function (pmf) $p_X(x)$ and the cumulative distribution function (cdf) $F_X(x)$ of X . **(10 points)**
2. Find (a) $P(1 < X \leq 5)$ and (b) $P(X > 5)$. **(10 points)**

Question 6

Consider an experiment of throwing a fair die. Let X be the random variable (r.v.) which assigns 1 if the number that appears is even and 0 if the number that appears is odd.

1. What is the range of X ? **10 points**
2. Find $P(X = 0)$ and $P(X = 1)$. **10 points**

Question 7

1. The mean weight of 500 male students at a certain college is 151 lb and the standard deviation is 15 lb. Assuming that the weights are normally distributed, find how many students weigh:
 - (a) between 120 and 155 lb **(5 points)** and
 - (b) more than 185 lb **(5 points)**

(Hint: Tables for the Normal distribution are provided at the back of the coursework)
2. If the probability that an individual will suffer a bad reaction from injection of a given serum is 0.001, determine the probability that out of 2000 individuals

-
- (a) exactly 3 (**5 points**)
 - (b) more than 2 (**5 points**)

will suffer a bad reaction.

(**Hint:** Use the Poisson distribution - an exact evaluation of the probabilities using the Binomial distribution would require much more labor).
