CHECKLIST FOR EBP PRACTICE PROJECT

Due Dates: See Course calendar

Section	Requirements : Scholarly Project- Part 1	Met	Not Met / Comments
PICOT Question	Appropriate PICOT question that meets all components to include population, intervention, comparison (If applicable), outcome, and time. P (Target population or problem): Who is your target population or what problem will be addressed? I (Intervention) C (Comparison): Not every PICOT question will have a comparison or control group (in which case there is no "C" in the question). If this is the case for your project, then describe the current state vs. the desired state in relationship to the problem and/or gap in practice. O (Outcomes to be measured): What outcomes are expected for your project? What outcomes will be measured? Be sure your outcomes link to the identified problem. T (Timeframe)		
Introduction Or Background	State problems, purpose, and significance of topic Significance of the problem may include: incidence and/or prevalence, national data and quality/regulatory expectations, impact on patient, family, and healthcare system, financial implications, cultural, healthcare policy, quality, safety, legal, ethical implications if pertinent. State the project purpose/aims and the relationship to your PICOT question. Define variables under study (conceptual and operational definitions) Develop method of organizing the data and provide rationale for this organization List question focusing the review Explain how the project is relevant to nursing, health administration or public health practice. <i>Note: Be sure to include in-text citations in this section and a full reference page (in APA format)</i>		
Framework	Describe the theoretical framework or conceptual model to be used for the project. Connect the study aims and PICOT question to the framework or model. Operationally define study variables. Provide any project assumptions. <i>Note: Be sure to include in-text citations in this section and a full reference page (in APA format)</i>	Met	Not Met / Comments

Section	Requirements : Scholarly Project- Part 1	Met	Not Met / Comments
Method	Search Strategy: keywords, search phrases, databases used, years of search, number of articles found, inclusion/exclusion criteria, number of articles retained and why (may use flowchart). Identify steps to ensure validity of search and retrieval; how did you evaluate the quality of the data? Describe your approach to analysis		
Results Critical Analysis of the studies	Articles reviewed with <u>a minimum</u> of 5 required. Present results of data analysis Develop conclusions Thorough review and critical analysis of literature (provide Coding sheet or table of organized data in the Appendix). <i>Note: Be sure to include in-text citations in this section and a full reference page (in APA format)</i>		
Discussion/Conclusion/Recommendations	Summarize methods Synthesize common themes Discuss the results in terms of the original questions identified – draw inferences from the results of the synthesis Critique across studies; discuss research hypotheses and conclusions Identify validity issues which affect study results Impact on practice Identify areas for future research
