

PTR: Two-Column Desktop Display

Create a @media rule for tablet display (1024px) for the PTR Website

Some suggestions:

1. Use the embedded @media rule you created in the practice exercise as a reference only
2. Add to the external CSS file the @media rule **@media only screen and (max-width: 1024px)** (home, yurts, activities and reservations webpages should have the same tablet display when resized. Don't worry about the main page)
3. Check every element on your html page
4. Within the @media rule {}, apply the changes you want to see when the viewport is resized
5. Remember best practices: Avoid using pixel (px) units in style sheets. Better to configure sizes in em units (12px=1em) or percentages (%)
