Suggestions for Further Reading

Philosophers have not written a great deal about homosexuality. Richard Mohr's writings include "Gay Rights," *Social Theory and Practice* 8 (1982), pp. 31-41; "Invisible Minorities, Civic Rights, Democracy," *Philosophical Forum* 16 (1985), pp. 1-24; and "AIDS, Gays, and State Coercion," *Bioethics* 1 (1987), pp. 35-50.

Also see Robert Baker and Frederick Elliston, eds., *Philosophy and Sex* (Buffalo, N.Y.: Prometheus Books, 1975); and C. H. Whiteley and Winifred M. Whiteley, *Sex and Morals* (New York: Basic Books, 1967).

Two articles defending anti-gay positions are Samuel McCracken, "Are Homosexuals Gay?" *Commentary* 67 (1979), pp. 23-28; and Paul Cameron, "A Case Against Homosexuality," *Human Life Review* 4 (1978), pp. 17-49.

CHAPTER 17

Famine, Affluence, and Morality

Peter Singer

Peter Singer is professor of philosophy and formerly was director of the Centre for Human Bioethics at Monash University in Australia. His best-known work is *Animal Liberation* (1975), which is widely credited with having launched the modern animal-rights movement. A prolific author, he has also written books about civil disobedience, reproductive technologies, sociobiology, Marx, and Hegel.

In the following essay Singer considers the question of whether it is morally defensible for affluent people to spend money on luxuries for themselves while less fortunate people are starving.

As I write this, in November 1971, people are dying in East Bengal from lack of food, shelter, and medical care. The suffering and death that are occurring there now are not inevitable, not unavoidable in any fatalistic sense of the term. Constant poverty, a cyclone, and a civil war have turned at least nine million people into destitute refugees; nevertheless, it is not beyond the capacity of the richer nations to give enough assistance to reduce any further suffering to very small proportions. The decisions and actions of human beings can prevent this kind of suffering. Unfortunately, human beings have not made the necessary decisions. At the individual level, people have, with very few exceptions, not responded to the situation in any significant way. Generally speaking, people have not given large sums to relief funds; they

Excerpted from Peter Singer, "Famine, Affluence, and Morality," *Philosophy and Public Affairs* 1, No. 3 (Spring 1972): 229-235, 238-243. Copyright © 1972 by Princeton University Press. Reprinted by permission of Princeton University Press.

have not written to their parliamentary representatives demanding increased government assistance; they have not demonstrated in the streets, held symbolic fasts, or done anything else directed toward providing the refugees with the means to satisfy their essential needs. At the government level, no government has given the sort of massive aid that would enable the refugees to survive for more than a few days. Britain, for instance, has given rather more than most countries. It has, to date, given £14,750,000. For comparative purposes, Britain's share of the nonrecoverable development costs of the Anglo-French Concorde project is already in excess of £275,000,000, and on present estimates will reach £440,000,000. The implication is that the British government values a supersonic transport more than thirty times as highly as it values the lives of the nine million refugees. Australia is another country which, on a per capita basis, is well up in the "aid to Bengal" table. Australia's aid, however, amounts to less than one-twelfth of the cost of Sydney's new opera house. The total amount given, from all sources, now stands at about £65,000,000. The estimated cost of keeping the refugees alive for one year is £464,000,000. Most of the refugees have now been in the camps for more than six months. The World Bank has said that India needs a minimum of £300,000,000 in assistance from other countries before the end of the year. It seems obvious that assistance on this scale will not be forthcoming. India will be forced to choose between letting the refugees starve or diverting funds from her own development program, which will mean that more of her own people will starve in the future.¹

These are the essential facts about the present situation in Bengal. So far as it concerns us here, there is nothing unique about this situation except its magnitude. The Bengal emergency is just the latest and most acute of a series of major emergencies in various parts of the world, arising both from natural and from man-made causes. There are also many parts of the world in which people die from malnutrition and lack of food independent of any special emergency. I take Bengal as my example only because it is the present concern, and because the size of the problem has ensured that it has been given adequate publicity. Neither individuals nor governments can claim to be unaware of what is happening there.

What are the moral implications of a situation like this? In what follows, I shall argue that the way people in relatively affluent countries react to a situation like that in Bengal cannot be justified; indeed, the whole way we look at moral issues—our moral conceptual scheme—

needs to be altered, and with it, the way of life that has come to be taken for granted in our society.

In arguing for this conclusion I will not, of course, claim to be morally neutral. I shall, however, try to argue for the moral position that I take, so that anyone who accepts certain assumptions, to be made explicit, will, I hope, accept my conclusion.

I begin with the assumption that suffering and death from lack of food, shelter, and medical care are bad. I think most people will agree about this, although one may reach the same view by different routes. I shall not argue for this view. People can hold all sorts of eccentric positions, and perhaps from some of them it would not follow that death by starvation is in itself bad. It is difficult, perhaps impossible, to refute such positions, and so for brevity I will henceforth take this assumption as accepted. Those who disagree need read no further.

My next point is this: if it is in our power to prevent something bad from happening, without thereby sacrificing anything of comparable moral importance, we ought, morally, to do it. By "without sacrificing anything of comparable moral importance" I mean without causing anything else comparably bad to happen, or doing something that is wrong in itself, or failing to promote some moral good, comparable in significance to the bad thing that we can prevent. This principle seems almost as uncontroversial as the last one. It requires us only to prevent what is bad, and not to promote what is good, and it requires this of us only when we can do it without sacrificing anything that is, from the moral point of view, comparably important. I could even, as far as the application of my argument to the Bengal emergency is concerned, qualify the point so as to make it: if it is in our power to prevent something very bad from happening, without thereby sacrificing anything morally significant, we ought, morally, to do it. An application of this principle would be as follows: if I am walking past a shallow pond and see a child drowning in it, I ought to wade in and pull the child out. This will mean getting my clothes muddy, but this is insignificant, while the death of the child would presumably be a very bad thing.

The uncontroversial appearance of the principle just stated is deceptive. If it were acted upon, even in its qualified form, our lives, our society, and our world would be fundamentally changed. For the principle takes, firstly, no account of proximity or distance. It makes no moral difference whether the person I can help is a neighbor's

child ten yards from me or a Bengali whose name I shall never know, ten thousand miles away. Secondly, the principle makes no distinction between cases in which I am the only person who could possibly do anything and cases in which I am just one among millions in the same position.

I do not think I need to say much in defense of the refusal to take proximity and distance into account. The fact that a person is physically near to us, so that we have personal contact with him, may make it more likely that we *shall* assist him, but this does not show that we *ought* to help him rather than another who happens to be further away. If we accept any principle of impartiality, universalizability, equality, or whatever, we cannot discriminate against someone merely because he is far away from us (or we are far away from him). Admittedly, it is possible that we are in a better position to judge what needs to be done to help a person near to us than one far away, and perhaps also to provide the assistance we judge to be necessary. If this were the case, it would be a reason for helping those near to us first. This may once have been a justification for being more concerned with the poor in one's town than with famine victims in India. Unfortunately for those who like to keep their moral responsibilities limited, instant communication and swift transportation have changed the situation. From the moral point of view, the development of the world into a "global village" has made an important, though still unrecognized, difference to our moral situation. Expert observers and supervisors, sent out by famine relief organizations or permanently stationed in famine-prone areas, can direct our aid to a refugee in Bengal almost as effectively as we could get it to someone in our own block. There would seem, therefore, to be no possible justification for discriminating on geographical grounds.

There may be a greater need to defend the second implication of my principle—that the fact that there are millions of other people in the same position, in respect to the Bengali refugees, as I am, does not make the situation significantly different from a situation in which I am the only person who can prevent something very bad from occurring. Again, of course, I admit that there is a psychological difference between the cases; one feels less guilty about doing nothing if one can point to others, similarly placed, who have also done nothing. Yet this can make no real difference to our moral obligations. Should I consider that I am less obliged to pull the drowning child out of the pond if on looking around I see other people, no further away than I am, who have also noticed the child but are doing nothing? One has

only to ask this question to see the absurdity of the view that numbers lessen obligation. It is a view that is an ideal excuse for inactivity; unfortunately most of the major evils—poverty, overpopulation, pollution—are problems in which everyone is almost equally involved.

The view that numbers do make a difference can be made plausible if stated in this way: if everyone in circumstances like mine gave £5 to the Bengal Relief Fund, there would be enough to provide food, shelter, and medical care for the refugees; there is no reason why I should give more than anyone else in the same circumstances as I am; therefore I have no obligation to give more than £5. Each premise in this argument is true, and the argument looks sound. It may convince us, unless we notice that it is based on a hypothetical premise, although the conclusion is not stated hypothetically. The argument would be sound if the conclusion were: if everyone in circumstances like mine were to give £5, I would have no obligation to give more than £5. If the conclusion were so stated, however, it would be obvious that the argument has no bearing on a situation in which it is not the case that everyone else gives £5. This, of course, is the actual situation. It is more or less certain that not everyone in circumstances like mine will give £5. So there will not be enough to provide the needed food, shelter, and medical care. Therefore by giving more than £5 I will prevent ~~more suffering than I would if I gave just £5.~~

If my argument so far has been sound, neither our distance from a preventable evil nor the number of other people who, in respect to that evil, are in the same situation as we are, lessens our obligation to mitigate or prevent that evil. I shall therefore take as established the principle I asserted earlier. As I have already said, I need to assert it only in its qualified form: if it is in our power to prevent something very bad from happening, without thereby sacrificing anything else morally significant, we ought, morally, to do it.

The outcome of this argument is that our traditional moral categories are upset. The traditional distinction between duty and charity cannot be drawn, or at least, not in the place we normally draw it. Giving money to the Bengal Relief Fund is regarded as an act of charity in our society. The bodies which collect money are known as "charities." These organizations see themselves in this way—if you send them a check, you will be thanked for your "generosity." Because giving money is regarded as an act of charity, it is not thought that there is anything wrong with not giving. The charitable man may be praised, but the man who is not charitable is not condemned. People do not

feel in any way ashamed or guilty about spending money on new clothes or a new car instead of giving it to famine relief. (Indeed, the alternative does not occur to them.) This way of looking at the matter cannot be justified. When we buy new clothes not to keep ourselves warm but to look "well-dressed" we are not providing for any important need. We would not be sacrificing anything significant if we were to continue to wear our old clothes, and give the money to famine relief. By doing so, we would be preventing another person from starving. It follows from what I have said earlier that we ought to give money away, rather than spend it on clothes which we do not need to keep us warm. To do so is not charitable, or generous. Nor is it the kind of act which philosophers and theologians have called "supererogatory"—an act which it would be good to do, but not wrong not to do. On the contrary, we ought to give the money away, and it is wrong not to do so. . . .

It may still be thought that my conclusions are so wildly out of line with what everyone else thinks and has always thought that there must be something wrong with the argument somewhere. In order to show that my conclusions, while certainly contrary to contemporary Western moral standards, would not have seemed so extraordinary at other times and in other places, I would like to quote a passage from a writer not normally thought of as a way-out radical, Thomas Aquinas.

Now, according to the natural order instituted by divine providence, material goods are provided for the satisfaction of human needs. Therefore the division and appropriation of property, which proceeds from human law, must not hinder the satisfaction of man's necessity from such goods. Equally, whatever a man has in superabundance is owed, of natural right, to the poor for their sustenance. So Ambrosius says, and it is also to be found in the *Decretum Gratiani*: "The bread which you withhold belongs to the hungry; the clothing you shut away, to the naked; and the money you bury in the earth is the redemption and freedom of the penniless."²

I now want to consider a number of points, more practical than philosophical, which are relevant to the application of the moral conclusion we have reached. These points challenge not the idea that we ought to be doing all we can to prevent starvation, but the idea that giving away a great deal of money is the best means to this end.

It is sometimes said that overseas aid should be a government responsibility, and that therefore one ought not to give to privately run charities. Giving privately, it is said, allows the government and the noncontributing members of society to escape their responsibilities.

This argument seems to assume that the more people there are who give to privately organized famine relief funds, the less likely it is that the government will take over full responsibility for such aid. This assumption is unsupported, and does not strike me as at all plausible. The opposite view—that if no one gives voluntarily, a government will assume that its citizens are uninterested in famine relief and would not wish to be forced into giving aid—seems more plausible. In any case, unless there were a definite probability that by refusing to give one would be helping to bring about massive government assistance, people who do refuse to make voluntary contributions are refusing to prevent a certain amount of suffering without being able to point to any tangible beneficial consequence of their refusal. So the onus of showing how their refusal will bring about government action is on those who refuse to give.

I do not, of course, want to dispute the contention that governments of affluent nations should be giving many times the amount of genuine, no-strings-attached aid that they are giving now. I agree, too, that giving privately is not enough, and that we ought to be campaigning actively for entirely new standards for both public and private contributions to famine relief. Indeed, I would sympathize with someone who thought that campaigning was more important than giving oneself, although I doubt whether preaching what one does not practice would be very effective. Unfortunately, for many people the idea that "it's the government's responsibility" is a reason for not giving which does not appear to entail any political action either.

Another, more serious reason for not giving to famine relief funds is that until there is effective population control, relieving famine merely postpones starvation. If we save the Bengal refugees now, others, perhaps the children of these refugees, will face starvation in a few years' time. In support of this, one may cite the now well-known facts about the population explosion and the relatively limited scope for expanded production.

This point, like the previous one, is an argument against relieving suffering that is happening now, because of a belief about what might happen in the future; it is unlike the previous point in that very good evidence can be adduced in support of this belief about the future. I will not go into the evidence here. I accept that the earth cannot support indefinitely a population rising at the present rate. This certainly poses a problem for anyone who thinks it important to prevent famine. Again, however, one could accept the argument without drawing the conclusion that it absolves one from any obligation to do

anything to prevent famine. The conclusion that should be drawn is that the best means of preventing famine, in the long run, is population control. It would then follow from the position reached earlier that one ought to be doing all one can to promote population control (unless one held that all forms of population control were wrong in themselves, or would have significantly bad consequences). Since there are organizations working specifically for population control, one would then support them rather than more orthodox methods of preventing famine.

A third point raised by the conclusion reached earlier relates to the question of just how much we all ought to be giving away. One possibility, which has already been mentioned, is that we ought to give until we reach the level of marginal utility—that is, the level at which, by giving more, I would cause as much suffering to myself or my dependents as I would relieve by my gift. This would mean, of course, that one would reduce oneself to very near the material circumstances of a Bengali refugee. It will be recalled that earlier I put forward both a strong and a moderate version of the principle of preventing bad occurrences. The strong version, which required us to prevent bad things from happening unless in doing so we would be sacrificing something of comparable moral significance, does seem to require reducing ourselves to the level of marginal utility. I should also say that the strong version seems to me to be the correct one. I proposed the more moderate version—that we should prevent bad occurrences unless, to do so, we had to sacrifice something morally significant—only in order to show that even on this surely undeniable principle a great change in our way of life is required. On the more moderate principle, it may not follow that we ought to reduce ourselves to the level of marginal utility, for one might hold that to reduce oneself and one's family to this level is to cause something significantly bad to happen. Whether this is so I shall not discuss, since, as I have said, I can see no good reason for holding the moderate version of the principle rather than the strong version. Even if we accepted the principle only in its moderate form, however, it should be clear that we would have to give away enough to ensure that the consumer society, dependent as it is on people spending on trivia rather than giving to famine relief, would slow down and perhaps disappear entirely. There are several reasons why this would be desirable in itself. The value and necessity of economic growth are now being questioned not only by conservationists, but by economists as well. There is no doubt, too, that the consumer society has had a distorting effect

on the goals and purposes of its members. Yet looking at the matter purely from the point of view of overseas aid, there must be a limit to the extent to which we should deliberately slow down our economy; for it might be the case that if we gave away, say, 40 percent of our Gross National Product, we would slow down the economy so much that in absolute terms we would be giving less than if we gave 25 percent of the much larger GNP that we would have if we limited our contribution to this smaller percentage.

I mention this only as an indication of the sort of factor that one would have to take into account in working out an ideal. Since Western societies generally consider one percent of the GNP an acceptable level for overseas aid, the matter is entirely academic. Nor does it affect the question of how much an individual should give in a society in which very few are giving substantial amounts.

It is sometimes said, though less often now than it used to be, that philosophers have no special role to play in public affairs, since most public issues depend primarily on an assessment of facts. On questions of fact, it is said, philosophers as such have no special expertise, and so it has been possible to engage in philosophy without committing oneself to any position on major public issues. No doubt there are some issues of social policy and foreign policy about which it can truly be said that a really expert assessment of the facts is required before taking sides or acting, but the issue of famine is surely not one of these. The facts about the existence of suffering are beyond dispute. Nor, I think, is it disputed that we can do something about it, either through orthodox methods of famine relief or through population control or both. This is therefore an issue on which philosophers are competent to take a position. The issue is one which faces everyone who has more money than he needs to support himself and his dependents, or who is in a position to take some sort of political action. These categories must include practically every teacher and student of philosophy in the universities of the Western world. If philosophy is to deal with matters that are relevant to both teachers and students, this is an issue that philosophers should discuss.

Discussion, though, is not enough. What is the point of relating philosophy to public (and personal) affairs if we do not take our conclusions seriously? In this instance, taking our conclusion seriously means acting upon it. The philosopher will not find it any easier than anyone else to alter his attitudes and way of life to the extent that, if I am right, is involved in doing everything that we ought to be doing. At the very least, though, one can make a start. The philosopher who

does so will have to sacrifice some of the benefits of the consumer society, but he can find compensation in the satisfaction of a way of life in which theory and practice, if not yet in harmony, are at least coming together.

Notes

1. There was also a third possibility: that India would go to war to enable the refugees to return to their lands. Since I wrote this paper, India has taken this way out. The situation is no longer that described above, but this does not affect my argument, as the next paragraph indicates.

2. *Summa Theologica*, II-II, Question 66, Article 7, in *Aquinas, Selected Political Writings*, ed. A. P. d'Entreves, trans. J. G. Dawson (Oxford: Basil Blackwell, 1948), 171.

CHAPTER 18

Feeding the Hungry

Jan Narveson

Jan Narveson, a philosopher who teaches at the University of Waterloo in Canada, takes a contractarian approach to moral philosophy—morality, in this view, consists in the agreements that rational, self-interested people would make for their mutual benefit. In the following selection he argues, from this point of view, that we have no extensive obligations to aid needy people.

Throughout history it has been the lot of most people to know of others worse off than they, and often enough of others who face starvation. In the contemporary world, television and other mass media enable all of us in the better-off areas to hear about starvation in even the most remote places. What, if any, are our obligations toward victims of starvation?

This can be a rather complex subject in real-world situations. We must begin by distinguishing importantly different cases. For *starve* functions both as a passive verb, indicating something that happens to one, and as an active verb, designating something inflicted by one person on another. In the latter case, starvation is a form of killing, and of course comes under the same strictures that any other method of killing is liable to. But when the problem is plague, crop-failure due to drought, or sheer lack of know-how, there is no obviously guilty party. Then the question is whether we, the amply fed, are guilty parties if we fail to come to the rescue of those victims.
