

Study Guide Instructions

Your assignment is to create a **Study Guide** for your quiz and exam by creating responses to the attached learning objectives as you work through two of your power point lectures.

Your completed assignment must include the number and wording of each learning objective along with your response to the learning objective. Please type all responses in **bold** print.

Be **creative** in your responses add color, highlights, photos, charts, drawings, etc. The more you personalize your study guide, the more effective it will be for you.

Please don't just copy what the power point says; **use your own words**.

If the learning objective refers to labeling a diagram or identifying disorders on images, you must **include an image** in your response to receive credit.

It is **not necessary to use complete sentences** in your responses. A short outline or bullet list using key terms is preferable.

If a learning object begins with the word "**Contrast**", your response should be in the form of a table or chart. Some tables are provided for you within the Study Guide.

Save your work as a **Word document** on your computer before uploading it. All CNM students have access to Word through the CNM email system. To access Word go your to CNM inbox and click on the grid in the upper left corner.

Name your file as in this example: "**Last name, First name Study Guide 1 AB**"

To earn full credit for your post you must post on time and respond to all of the learning objectives appropriately.

I will make written comments on one student submission. **I will post my comments in the learning module**. Please read my comments and edit your own Study Guide to improve its content.

You will not be able to see my comments until after you have submitted your assignment.
