

Video Guide 3: *The Difference Between Us* (streaming video available through the UCCS Library)
<https://libproxy.uccs.edu/login?url=https://fod-infobase-com.libproxy.uccs.edu/PortalPlaylists.aspx?wID=103125&xtid=49734>

1. (a) Why is it impossible to sort people into consistent racial groups based on biological or physical differences?

(b) How does genetic evidence refute the concept of biological race?

2. Why do we see differences in skin color in different human populations? How did different skin colors evolve?

3. Who has benefitted from the (incorrect) belief that we can sort people according to race and that there are natural or biologically based differences between racial groups?

- 4. Athletics is one area where talking about ideas of inborn racial differences remains common. Why do some populations or groups seem to dominate certain sports but not others? What does it mean that the groups that dominate those sports have changed over time?**
- 5. What is the difference between a biological and a social view of race?**
- 6. At the beginning of the film, the students are asked to predict whom they will be most like when they compare their DNA samples. How did the results compare with your expectations? Did you share the students' surprise? If so, why?**
