Violence has been the subject of interest in developed countries. a victim of interpersonal violence can be injured or death. This affect their health, such as chronic somatic diseases, depression, eating disorders. These violence setting pose a risk to children and the elderly people. Violence can be in the home or in the workplace and this affects occupational health, safety hazards and victimization. Trends in violence today include hitting, choking, pushing, spitting, biting, kicking, shaking fists, threatening assault, groping and pinching among others.

Underlying Principles

1. Force is never an option.
2. Violence is never an option..
3. Following the legal process is not considered force.
4. We do not consider the creation or signing of petitions to be force.
5. Force and violence have never and can never solve a conflict.
6. Violence and war produce more violence, hate, and resentment.

Nursing Interventions

WHO? WHEN? WHY? HOW?

1. Containing calm passage towards the patient
2. Provide physical Security to the patient
3. Provide the right medication therapy treatment program for the patient
4. Observe the behavior of the patient closely and ensure that the patient is safe.
5. Use sedating medication in an acute situation to calm the client so that client will not harm self or others.
