

CISS 2350 – Networking Technology

Writing Assignment #2

100 points

You are to write a paper discussing the following two types of network naming: NetBIOS and DNS. Your paper should discuss where each naming scheme is used, and discuss the pros and cons of each scheme.

Grading: The paper is worth 100 points. The grade will come from your paper only. Papers with accurate, specific, and varied references will score higher. Papers that are well formatted, properly referenced, and cohesive will score higher.

Collaboration Policy: No collaboration allowed. The work on the paper will be an individual effort only.

Turn-in Requirement: The paper is due **Wednesday, April 19**. Papers will be two to three pages in length (double spaced). The title page does not count as one of the pages for the report. The title page should clearly state the title of your paper, and will include your name and the course number and title. The bibliography will not count as one of the required pages. All references will be properly cited. You will use Times New Roman 12-point font for your paper and will have a 1" margin on all sides. You will submit an electronic copy of the paper through Blackboard for grading **not later than 1:45 pm** on the due date. Papers received after this time will be considered late and will result in point deductions on the assignment.

Late Policy: There will be a 10% penalty for each day that the paper is late without prior coordination with me. This means that the best you can do is 90% of the total points possible if you are one day late, 80% if two, and so forth.
