

We have heard much about BREXIT, where Great Britain has voted to leave the European Union. This will have an impact on the currency known as the EURO.

Research this topic, what do you think the impact will be on the currency of countries who decide to 'leave the European Union', or what impact the departure of countries from the Union will do to the EURO currency?

Offer your thoughts, research an article and summarize, or consider providing an example to illustrate your ideas on how this might change the value of the EURO going forward.

Deliverable: 2-3 page discussion paper - submit on or before 3/8/18 include references, and any other important citations.
