Students 1: SHAQUITA M.

The field of sociology deals with human behavior. Therefore, I believe the topic is essential for the sociology research project because the act of eating breakfast every day is a behavior that develops in a person. There is little knowledge regarding students who take breakfast and their performance related to those who do not take breakfast. The first process of conducting a sociology research project is identifying a topic. I agree that literature review would help in identifying the existing knowledge on taking breakfast and student performance. The hypothesis is the projected results of the study and thus should be developed before results are obtained. I concur that surveys and observations are the best research methods because the students will be surveyed to realize those who do not take breakfast and observe their performance over the semester. An average of thirty students will be the best sample in obtaining accurate results to represent the whole population.

Student 2: RAEGAN M.

It is true that students undergo significant challenges when they are not in uniforms; therefore, this will cause unusual behaviors due to judgment on other students' clothes. Thus, conducting sociological research on this topic would help realize the effects of school uniforms in high school. The topic is selected as it is the current pressing issue in high school, and thus, several arguments have emerged, such as uniforms will reduce student's freedom and reduce bullying. I accede that the hypothesis to be tested is wearing uniforms will reduce bullying in high school. Therefore, the research methods to be used include field observation and survey. Field observation will be conducted before the uniform is introduced and after it was introduced.

The terms used will consist of keywords such as fight and actions from the students. Surveys will be done to students a few months after the uniform is introduced to get the best results.

Furthermore, the two methods will be essential in obtaining the best and most reliable results which are logical.
