

For your final discussion post of the semester, please select one screening topic from the Week 13 folder and one topic from the Week 14 folder. After selecting your topics of interest, please respond to the following:

- Think about the screening recommendations described for that particular screening topic. Consider the population (e.g., age ranges, sex, etc.), the recommendations, and the grade (i.e., A, B, C, D, or I) given for that particular screening procedure. After reading all of the information presented (Evidence Summary, Recommendation Statement, etc.), what are your overall reactions to the screening recommendations? Do you concur? Do you have hesitations or reservations about the recommendations? Please explain why. **(2 paragraphs of 4-5 sentences each for each health topic chosen).**
- Imagine you or someone you know is at risk of the health issues you have chosen for this discussion. Would you suggest that they follow the recommendations or would you suggest something different to them? Please explain why. **(1 paragraph of 4-5 sentences for each health topic).**
- There is no peer response due with this post, so please be thorough, detailed, and specific in your above responses.

I chose these two topics to write about. One is **Chlamydia and Gonorrhea Screening Recommendations** and use this link for the information

<https://www.uspreventiveservicestaskforce.org/Page/Document/UpdateSummaryFinal/chlamydia-and-gonorrhea-screening>

the other topic is **Syphilis Screening Recommendation for Pregnant Women** and use this link for more information

<https://www.uspreventiveservicestaskforce.org/Page/Document/UpdateSummaryFinal/syphilis-infection-in-pregnancy-screening1>
