

ACTIVE LEARNING TEMPLATE: *Nursing Skill*

STUDENT NAME _____

SKILL NAME _____ REVIEW MODULE CHAPTER _____

Description of Skill

Nursing is a field that requires strong communication skills and needs to have medical knowledge such as giving vaccines and drawing blood.

Indications

Acute pain and disturbed body image.
Imbalanced body nutrition which is below the body requirement.
Disturbed sleeping constipation and diarrhoea.

Outcomes/Evaluation

Damage to the surrounding organ and internal bleeding.
Damage in urinary tract, lung and abdominal infection.
Wounds may break open or take along time to heal.
Scar tissue due to intestinal blockage.
Inability to absorb more and vital nutrients in the body.
Difficulty breathing and blood clot.
The patient exhibits normal breathing pattern.
The patient inhibits good fluid flow and balance.

Potential Complications

Allergic reactions which is caused by plasma reacting with recipient antigens.
Circulatory overload. This is circulation of blood volume greater than the circulatory system can accommodate.
Hemolytic reactions. Comprises of infusion of incompatible blood products.
Septic reaction. It is due to transfusion of blood contaminated with bacteria.

CONSIDERATIONS

Nursing Interventions (pre, intra, post)

Accessing the prestomal skin, skin around the stomal should be clean free of irritation rashes and inflammation.
