## Professional Goals

**Student Name:**

**Date:**

<b>Number</b>	<b>Measurable Goal</b>	<b>Plan to Attain</b>	<b>Completion Date</b>
	Achieve fundamental features that describe a successful nurse	Will be working on being a successful nurse based on the definition of a nurse. A registered nurse deals with fortification, elevation and capabilities of stopping diseases and injury through diagnoses and treatment of individuals, communities and families (Feo et al., 2018). this makes nursing a demanding job which I am sure I will be able to achieve. But, first, I will focus on enhancing my teamwork abilities because nurses act as an intermediary between doctors and patients. This will help in providing vital help when required. Also, to attain this, it is essential to understand the diversity of	11/19/2021

		<p>knowledge rather than ignorance.</p> <p>Attaining this will be continuous throughout my nursing career.</p>	
2	Committed to lifelong learning	<p>Nursing is a demanding career and I believe that advancement in knowledge plays a key role in dealing with the varying care procedures. Therefore, education does not end at graduation but progresses while still working as a nurse (Hirst et al., 2017). I have plans to advance my education to a master's degree after gaining nursing experience.</p> <p>Applying the required knowledge plays a critical role in patient care as well as progressing learning. I will stay updated on education by attending conferences and enrolling in emerging nursing courses and working in meaningful medical organizations. Being current on education and experience helps eradicate medication errors making me an effective and confident nurse.</p>	04/15/2022

3	Improve technology skills	<p>One of the crucial things to understand as a nurse in the medical technologies used in hospitals. Technology changes rapidly due to advancements in diagnosis and treatment procedures. Therefore, to handle patients with care, I will need to learn the skills because of the ever-evolving technologies. Moreover, regardless of staying up to date with new technologies, it is critical to have acquaintances on troubleshooting technology challenges that can straightforwardly affect patient care in malfunctioning events (Glasgow et al., 2018). Nurses and other providers can concentrate on data from computers that fail to perceive essential, elusive variations in clinical status, which enhances considerations of technology and physiological signs that will result in better care.</p>	08/19/2022
4	Offer continuing community service to	I have always wished to give a hand to those that require medical help or	01/06/2023

	<p>the less fortunate and those that require medical help</p>	<p>traveling to needy nations to offer my help throughout my career. Giving back to the community requires a person to have essential nursing skills (Beuthin et al., 2018). Also, I have planned to register with disaster registries and disaster response companies because it will be an honor to help the disadvantaged and needy individuals. This will help in defining me as a registered nurse. Furthermore, I will be offering comfort to the people as well as improving my ability and training in the medical industry.</p>	
5	<p>Become an expert in a nursing career</p>	<p>Becoming successful in a nursing career is critical; however, it requires one to have knowledge and understanding in the nursing field as well as experience. Nurses handle several works associated with the caring of patients. Some of the events that nurses are involved with comprise entering patient data, evaluating patient pain levels, handling</p>	06/02/2023

		visitors, allocating medication and manipulating numerous orders from doctors (Amelia Howard-Hill NP & Byrne, 2017). I will thus concentrate on becoming a specialist on several tasks done by the registered nurse in their workday schedule. This will help the nurse to advance in the area I am interested in specializing in. In addition, being an expert in one area makes the nurse marketable and needed in a certain specialty.
