

## COMP1850 :: HOMEWORK 06

**OBJECTIVE** Write an HTML form

---

**REQUIREMENTS** Write a well styled, semantic HTML page that includes a form with the following characteristics:

- Include inputs for a first name, a last name and a student number. The form names for these three fields must be **firstname**, **lastname** and **studentnumber** respectively
- Include an input for the user's name prefix. Use the form name **prefix** for this data. The user must choose only one from this group of options: Mr, Mrs or Ms.
- Give the user a way to specify which, if any, part time BCIT classes they are considering registering for. They are not required to choose any courses, and they are permitted to choose several courses at once. This field must be named **courses**. Options should include COMP1850, COMP1950, COMP1409, COMP1630, COMP2015 and COMP3015.
- Include an area for the user to add a comment. Name this field **comments**
- The form method must be **post**
- The form action must be: [http://bcitcomp.ca/comp1850\\_homework06.php](http://bcitcomp.ca/comp1850_homework06.php)
- All form elements should include labels (or placeholders) and have appropriate ids and names.
- All form elements should be aligned nicely.
- CSS style should be applied throughout the form. You must demonstrate a clear effort towards making a visually appealing form.

Ensure this homework page can be found when a user visits your web space on bcitcomp.ca. For example either make this page the new index.html homepage or provide a link on your old index.html to this homework #6 page.

---

**NOTES** Choose the best input type for the job. Consider whether the user should be able to choose all, none or some from a group of options, or whether it should be an exclusive choice of one from a group.

---

**SUBMISSION** **Assigned:** Session 10      **Due:** 11:59pm the night before Session 11  
Homework must be published to *bcitcomp.ca* before the due date.
