

Growth and Development

STUDENT NAME _____

DEVELOPMENTAL STAGE TODDLER

REVIEW MODULE CHAPTER _____

EXPECTED GROWTH AND DEVELOPMENT

Physical Development

The child has become very lean. However he is much stronger and tall.

Cognitive Development

The thinking and reasoning capacity of the child has really developed. He/she knows, understand and can differentiate various colors and count numbers and letters. He can recognize familiar faces.

Psychological Development

The child has the ability of managing his feelings. The child starts to develop friendships between peer groups and sees them as very integral part of his life. The understand right and wrong.

Age- Appropriate Activities

The age appropriate activities of the child at this age include block games, matching colors and sorting. These activities should arouse the child's interest in learning.

Health promotion

Some health issues suffered by children during this period include biting thumb sucking and stuttering. These problems should be reported and checked by physician if they tend to persist.

Immunizations

All preschool students should be immunized against diphtheria polio, NMR and viceria. All other recommendation of immunizations as stipulated by CDC must be adhered to.

Health Screening

Blood pressure should be screened for stability visual and hearing ability should be screened together with other physical conditions. Oral health and mental health is important.

Nutrition

The nutrition should be checked for balance diet because at this age the child's body is rapidly growing. The food has to suffer on a regular basis.

Injury Prevention

The child should be constantly monitored because of the destructive nature of the children at this age. The child should be away from harmful objects and blunt objects. A full time monitoring of child's activities required.
