

and who deny with contempt the rights and liberties of others, are not likely, it is said, to let scruples concerning the rule of law interfere with their interests in particular cases. The inevitable vagueness of laws in general and the wide scope allowed for their interpretation encourages an arbitrariness in reaching decisions which only an allegiance to justice can allay. Thus it is maintained that where we find formal justice, the rule of law and the honoring of legitimate expectations, we are likely to find substantive justice as well. The desire to follow rules impartially and consistently, to treat similar cases similarly, and to accept the consequences of the application of public norms is intimately connected with the desire, or at least the willingness, to recognize the rights and liberties of others and to share fairly in the benefits and burdens of social cooperation. The one desire tends to be associated with the other. This contention is certainly plausible but I shall not examine it here. For it cannot be properly assessed until we know what are the most reasonable principles of substantive justice and under what conditions men come to affirm and to live by them. Once we understand the content of these principles and their basis in reason and human attitudes, we may be in a position to decide whether substantive and formal justice are tied together.

11. TWO PRINCIPLES OF JUSTICE

I shall now state in a provisional form the two principles of justice that I believe would be chosen in the original position. In this section I wish to make only the most general comments, and therefore the first formulation of these principles is tentative. As we go on I shall run through several formulations and approximate step by step the final statement to be given much later. I believe that doing this allows the exposition to proceed in a natural way.

The first statement of the two principles reads as follows.

First: each person is to have an equal right to the most extensive basic liberty compatible with a similar liberty for others.

Second: social and economic inequalities are to be arranged so that they are both (a) reasonably expected to be to everyone's advantage, and (b) attached to positions and offices open to all.

There are two ambiguous phrases in the second principle, namely "everyone's advantage" and "open to all." Determining their sense more exactly will lead to a second formulation of the principle in § 13. The final version of the two principles is given in § 46; § 39 considers the rendering of the first principle.

By way of general comment, these principles primarily apply, as I have said, to the basic structure of society. They are to govern the assignment of rights and duties and to regulate the distribution of social and economic advantages. As their formulation suggests, these principles presuppose that the social structure can be divided into two more or less distinct parts, the first principle applying to the one, the second to the other. They distinguish between those aspects of the social system that define and secure the equal liberties of citizenship and those that specify and establish social and economic inequalities. The basic liberties of citizens are, roughly speaking, political liberty (the right to vote and to be eligible for public office) together with freedom of speech and assembly; liberty of conscience and freedom of thought; freedom of the person along with the right to hold (personal) property; and freedom from arbitrary arrest and seizure as defined by the concept of the rule of law. These liberties are all required to be equal by the first principle, since citizens of a just society are to have the same basic rights.

The second principle applies, in the first approximation, to the distribution of income and wealth and to the design of organizations that make use of differences in authority and responsibility, or chains of command. While the distribution of wealth and income need not be equal, it must be to everyone's advantage, and at the same time, positions of authority and offices of command must be accessible to all. One applies the second principle by holding positions open, and then, subject to this constraint, arranges social and economic inequalities so that everyone benefits.

These principles are to be arranged in a serial order with the first principle prior to the second. This ordering means that a departure from the institutions of equal liberty required by the first principle cannot be justified by, or compensated for, by greater social and economic advantages. The distribution of wealth and income, and the hierarchies of authority, must be consistent with both the liberties of equal citizenship and equality of opportunity.

It is clear that these principles are rather specific in their content, and their acceptance rests on certain assumptions that I must eventually try to explain and justify. A theory of justice depends upon a theory of society in ways that will become evident as we proceed. For the present, it should be observed that the two principles (and this holds for all formulations) are a special case of a more general conception of justice that can be expressed as follows.

All social values—liberty and opportunity, income and wealth, and the bases of self-respect—are to be distributed equally unless an unequal distribution of any, or all, of these values is to everyone's advantage.

Injustice, then, is simply inequalities that are not to the benefit of all. Of course, this conception is extremely vague and requires interpretation.

As a first step, suppose that the basic structure of society distributes certain primary goods, that is, things that every rational man is presumed to want. These goods normally have a use whatever a person's rational plan of life. For simplicity, assume that the chief primary goods at the disposition of society are rights and liberties, powers and opportunities, income and wealth. (Later on in Part Three the primary good of self-respect has a central place.) These are the social primary goods. Other primary goods such as health and vigor, intelligence and imagination, are natural goods; although their possession is influenced by the basic structure, they are not so directly under its control. Imagine, then, a hypothetical initial arrangement in which all the social primary goods are equally distributed: everyone has similar rights and duties, and income and wealth are evenly shared. This state of affairs provides a benchmark for judging improvements. If certain inequalities of wealth and organizational powers would make everyone better off than in this hypothetical starting situation, then they accord with the general conception.

Now it is possible, at least theoretically, that by giving up some of their fundamental liberties men are sufficiently compensated by the resulting social and economic gains. The general conception of justice imposes no restrictions on what sort of inequalities are permissible; it only requires that everyone's position be improved. We need not suppose anything so drastic as consenting to a condition of

slavery. Imagine instead that men forego certain political rights when the economic returns are significant and their capacity to influence the course of policy by the exercise of these rights would be marginal in any case. It is this kind of exchange which the two principles as stated rule out; being arranged in serial order they do not permit exchanges between basic liberties and economic and social gains. The serial ordering of principles expresses an underlying preference among primary social goods. When this preference is rational so likewise is the choice of these principles in this order.

In developing justice as fairness I shall, for the most part, leave aside the general conception of justice and examine instead the special case of the two principles in serial order. The advantage of this procedure is that from the first the matter of priorities is recognized and an effort made to find principles to deal with it. One is led to attend throughout to the conditions under which the acknowledgment of the absolute weight of liberty with respect to social and economic advantages, as defined by the lexical order of the two principles, would be reasonable. Offhand, this ranking appears extreme and too special a case to be of much interest; but there is more justification for it than would appear at first sight. Or at any rate, so I shall maintain (§82). Furthermore, the distinction between fundamental rights and liberties and economic and social benefits marks a difference among primary social goods that one should try to exploit. It suggests an important division in the social system. Of course, the distinctions drawn and the ordering proposed are bound to be at best only approximations. There are surely circumstances in which they fail. But it is essential to depict clearly the main lines of a reasonable conception of justice; and under many conditions anyway, the two principles in serial order may serve well enough. When necessary we can fall back on the more general conception.

The fact that the two principles apply to institutions has certain consequences. Several points illustrate this. First of all, the rights and liberties referred to by these principles are those which are defined by the public rules of the basic structure. Whether men are free is determined by the rights and duties established by the major institutions of society. Liberty is a certain pattern of social forms. The first principle simply requires that certain sorts of rules, those

defining basic liberties, apply to everyone equally and that they allow the most extensive liberty compatible with a like liberty for all. The only reason for circumscribing the rights defining liberty and making men's freedom less extensive than it might otherwise be is that these equal rights as institutionally defined would interfere with one another.

Another thing to bear in mind is that when principles mention persons, or require that everyone gain from an inequality, the reference is to representative persons holding the various social positions, or offices, or whatever, established by the basic structure. Thus in applying the second principle I assume that it is possible to assign an expectation of well-being to representative individuals holding these positions. This expectation indicates their life prospects as viewed from their social station. In general, the expectations of representative persons depend upon the distribution of rights and duties throughout the basic structure. When this changes, expectations change. I assume, then, that expectations are connected: by raising the prospects of the representative man in one position we presumably increase or decrease the prospects of representative men in other positions. Since it applies to institutional forms, the second principle (or rather the first part of it) refers to the expectations of representative individuals. As I shall discuss below, neither principle applies to distributions of particular goods to particular individuals who may be identified by their proper names. The situation where someone is considering how to allocate certain commodities to needy persons who are known to him is not within the scope of the principles. They are meant to regulate basic institutional arrangements. We must not assume that there is much similarity from the standpoint of justice between an administrative allotment of goods to specific persons and the appropriate design of society. Our common sense intuitions for the former may be a poor guide to the latter.

Now the second principle insists that each person benefit from permissible inequalities in the basic structure. This means that it must be reasonable for each relevant representative man defined by this structure, when he views it as a going concern, to prefer his prospects with the inequality to his prospects without it. One is not allowed to justify differences in income or organizational powers on the ground that the disadvantages of those in one position are out-

weighed by the greater advantages of those in another. Much less can infringements of liberty be counterbalanced in this way. Applied to the basic structure, the principle of utility would have us maximize the sum of expectations of representative men (weighted by the number of persons they represent, on the classical view); and this would permit us to compensate for the losses of some by the gains of others. Instead, the two principles require that everyone benefit from economic and social inequalities. It is obvious, however, that there are indefinitely many ways in which all may be advantaged when the initial arrangement of equality is taken as a benchmark. How then are we to choose among these possibilities? The principles must be specified so that they yield a determinate conclusion. I now turn to this problem.

12. INTERPRETATIONS OF THE SECOND PRINCIPLE

I have already mentioned that since the phrases "everyone's advantage" and "equally open to all" are ambiguous, both parts of the second principle have two natural senses. Because these senses are independent of one another, the principle has four possible meanings. Assuming that the first principle of equal liberty has the same sense throughout, we then have four interpretations of the two principles. These are indicated in the table below.

	"Everyone's advantage"	
	"Equally open"	
	Principle of efficiency	Difference principle
Equality as careers open to talents	System of Natural Liberty	Natural Aristocracy
Equality as equality of fair opportunity	Liberal Equality	Democratic Equality

I shall sketch in turn these three interpretations: the system of natural liberty, liberal equality, and democratic equality. In some respects this sequence is the more intuitive one, but the sequence via

first-person dictatorship and the free-rider forms, since in each case a proper name, or pronoun, or a rigged definite description is needed, either to single out the dictator or to characterize the free-rider. Generality does not, however, exclude general egoism, for each person is allowed to do whatever, in his judgment, is most likely to further his own aims. The principle here can clearly be expressed in a perfectly general way. It is the ordering condition which renders general egoism inadmissible, for if everyone is authorized to advance his aims as he pleases, or if everyone ought to advance his own interests, competing claims are not ranked at all and the outcome is determined by force and cunning.

The several kinds of egoism, then, do not appear on the list presented to the parties. They are eliminated by the formal constraints. Of course, this is not a surprising conclusion, since it is obvious that by choosing one of the other conceptions the persons in the original position can do much better for themselves. Once they ask which principles all should agree to, no form of egoism is a serious candidate for consideration in any case. This only confirms what we knew already, namely, that although egoism is logically consistent and in this sense not irrational, it is incompatible with what we intuitively regard as the moral point of view. The significance of egoism philosophically is not as an alternative conception of right but as a challenge to any such conception. In justice as fairness this is reflected in the fact that we can interpret general egoism as the no-agreement point. It is what the parties would be stuck with if they were unable to reach an understanding.

24. THE VEIL OF IGNORANCE

The idea of the original position is to set up a fair procedure so that any principles agreed to will be just. The aim is to use the notion of pure procedural justice as a basis of theory. Somehow we must nullify the effects of specific contingencies which put men at odds and tempt them to exploit social and natural circumstances to their own advantage. Now in order to do this I assume that the parties are situated behind a veil of ignorance. They do not know how the various alternatives will affect their own particular case

and they are obliged to evaluate principles solely on the basis of general considerations.¹¹

It is assumed, then, that the parties do not know certain kinds of particular facts. First of all, no one knows his place in society, his class position or social status; nor does he know his fortune in the distribution of natural assets and abilities, his intelligence and strength, and the like. Nor, again, does anyone know his conception of the good, the particulars of his rational plan of life, or even the special features of his psychology such as his aversion to risk or liability to optimism or pessimism. More than this, I assume that the parties do not know the particular circumstances of their own society. That is, they do not know its economic or political situation, or the level of civilization and culture it has been able to achieve. The persons in the original position have no information as to which generation they belong. These broader restrictions on knowledge are appropriate in part because questions of social justice arise between generations as well as within them, for example, the question of the appropriate rate of capital saving and of the conservation of natural resources and the environment of nature. There is also, theoretically anyway, the question of a reasonable genetic policy. In these cases too, in order to carry through the idea of the original position, the parties must not know the contingencies that set them in opposition. They must choose principles the consequences of which they are prepared to live with whatever generation they turn out to belong to.

As far as possible, then, the only particular facts which the parties know is that their society is subject to the circumstances of justice and whatever this implies. It is taken for granted, however, that they know the general facts about human society. They understand political affairs and the principles of economic theory; they know the basis of social organization and the laws of human psychology. Indeed, the parties are presumed to know whatever general facts affect the choice of the principles of justice. There are

11. The veil of ignorance is so natural a condition that something like it must have occurred to many. The closest explicit statement of it known to me is found in J. C. Harsanyi, "Cardinal Utility in Welfare Economics and in the Theory of Risk-Taking," *Journal of Political Economy*, vol. 61 (1953). Harsanyi uses it to develop a utilitarian theory, as I discuss below in §§27-28.

no limitations on general information, that is, on general laws and theories, since conceptions of justice must be adjusted to the characteristics of the systems of social cooperation which they are to regulate, and there is no reason to rule out these facts. It is, for example, a consideration against a conception of justice that, in view of the laws of moral psychology, men would not acquire a desire to act upon it even when the institutions of their society satisfied it. For in this case there would be difficulty in securing the stability of social cooperation. It is an important feature of a conception of justice that it should generate its own support. That is, its principles should be such that when they are embodied in the basic structure of society men tend to acquire the corresponding sense of justice. Given the principles of moral learning, men develop a desire to act in accordance with its principles. In this case a conception of justice is stable. This kind of general information is admissible in the original position.

The notion of the veil of ignorance raises several difficulties. Some may object that the exclusion of nearly all particular information makes it difficult to grasp what is meant by the original position. Thus it may be helpful to observe that one or more persons can at any time enter this position, or perhaps, better, simulate the deliberations of this hypothetical situation, simply by reasoning in accordance with the appropriate restrictions. In arguing for a conception of justice we must be sure that it is among the permitted alternatives and satisfies the stipulated formal constraints. No considerations can be advanced in its favor unless they would be rational ones for us to urge were we to lack the kind of knowledge that is excluded. The evaluation of principles must proceed in terms of the general consequences of their public recognition and universal application, it being assumed that they will be complied with by everyone. To say that a certain conception of justice would be chosen in the original position is equivalent to saying that rational deliberation satisfying certain conditions and restrictions would reach a certain conclusion. If necessary, the argument to this result could be set out more formally. I shall, however, speak throughout in terms of the notion of the original position. It is more economical and suggestive, and brings out certain essential features that otherwise one might easily overlook.

These remarks show that the original position is not to be thought of as a general assembly which includes at one moment everyone who will live at some time; or, much less, as an assembly of everyone who could live at some time. It is not a gathering of all actual or possible persons. To conceive of the original position in either of these ways is to stretch fantasy too far; the conception would cease to be a natural guide to intuition. In any case, it is important that the original position be interpreted so that one can at any time adopt its perspective. It must make no difference when one takes up this viewpoint, or who does so: the restrictions must be such that the same principles are always chosen. The veil of ignorance is a key condition in meeting this requirement. It insures not only that the information available is relevant, but that it is at all times the same.

It may be protested that the condition of the veil of ignorance is irrational. Surely, some may object, principles should be chosen in the light of all the knowledge available. There are various replies to this contention. Here I shall sketch those which emphasize the simplifications that need to be made if one is to have any theory at all. (Those based on the Kantian interpretation of the original position are given later, § 40.) To begin with, it is clear that since the differences among the parties are unknown to them, and everyone is equally rational and similarly situated, each is convinced by the same arguments. Therefore, we can view the choice in the original position from the standpoint of one person selected at random. If anyone after due reflection prefers a conception of justice to another, then they all do, and a unanimous agreement can be reached. We can, to make the circumstances more vivid, imagine that the parties are required to communicate with each other through a referee as intermediary, and that he is to announce which alternatives have been suggested and the reasons offered in their support. He forbids the attempt to form coalitions, and he informs the parties when they have come to an understanding. But such a referee is actually superfluous, assuming that the deliberations of the parties must be similar.

Thus there follows the very important consequence that the parties have no basis for bargaining in the usual sense. No one knows his situation in society nor his natural assets, and therefore no one is in a position to tailor principles to his advantage. We

might imagine that one of the contractees threatens to hold out unless the others agree to principles favorable to him. But how does he know which principles are especially in his interests? The same holds for the formation of coalitions: if a group were to decide to band together to the disadvantage of the others, they would not know how to favor themselves in the choice of principles. Even if they could get everyone to agree to their proposal, they would have no assurance that it was to their advantage, since they cannot identify themselves either by name or description. The one case where this conclusion fails is that of saving. Since the persons in the original position know that they are contemporaries (taking the present time of entry interpretation), they can favor their generation by refusing to make any sacrifices at all for their successors; they simply acknowledge the principle that no one has a duty to save for posterity. Previous generations have saved or they have not; there is nothing the parties can now do to affect that. So in this instance the veil of ignorance fails to secure the desired result. Therefore I resolve the question of justice between generations in a different way by altering the motivation assumption. But with this adjustment no one is able to formulate principles especially designed to advance his own cause. Whatever his temporal position, each is forced to choose for everyone.¹²

The restrictions on particular information in the original position are, then, of fundamental importance. Without them we would not be able to work out any definite theory of justice at all. We would have to be content with a vague formula stating that justice is what would be agreed to without being able to say much, if anything, about the substance of the agreement itself. The formal constraints of the concept of right, those applying to principles directly, are not sufficient for our purpose. The veil of ignorance makes possible a unanimous choice of a particular conception of justice. Without these limitations on knowledge the bargaining problem of the original position would be hopelessly complicated. Even if theoretically a solution were to exist, we would not, at present anyway, be able to determine it.

The notion of the veil of ignorance is implicit, I think, in Kant's

12. Rousseau, *The Social Contract*, bk. II, ch. IV, par. 5.

ethics (§40). Nevertheless the problem of defining the knowledge of the parties and of characterizing the alternatives open to them has often been passed over, even by contract theories. Sometimes the situation definitive of moral deliberation is presented in such an indeterminate way that one cannot ascertain how it will turn out. Thus Perry's doctrine is essentially contractarian: he holds that social and personal integration must proceed by entirely different principles, the latter by rational prudence, the former by the concurrence of persons of good will. He would appear to reject utilitarianism on much the same grounds suggested earlier: namely, that it improperly extends the principle of choice for one person to choices facing society. The right course of action is characterized as that which best advances social aims as these would be formulated by reflective agreement given that the parties have full knowledge of the circumstances and are moved by a benevolent concern for one another's interests. No effort is made, however, to specify in any precise way the possible outcomes of this sort of agreement. Indeed, without a far more elaborate account, no conclusions can be drawn.¹³ I do not wish here to criticize others; rather, I want to explain the necessity for what may seem at times like so many irrelevant details.

Now the reasons for the veil of ignorance go beyond mere simplicity. We want to define the original position so that we get the desired solution. If a knowledge of particulars is allowed, then the outcome is biased by arbitrary contingencies. As already observed, to each according to his threat advantage is not a principle of justice. If the original position is to yield agreements that are just, the parties must be fairly situated and treated equally as moral persons. The arbitrariness of the world must be corrected for by adjusting the circumstances of the initial contractual situation. Moreover, if in choosing principles we required unanimity even when there is full information, only a few rather obvious cases could be decided. A conception of justice based on unanimity in these circumstances would indeed be weak and trivial. But once knowledge is excluded, the requirement of unanimity is not out of place and the fact that

13. See R. B. Perry, *The General Theory of Value* (New York, Longmans, Green and Company, 1926), pp. 674-682.

it can be satisfied is of great importance. It enables us to say of the preferred conception of justice that it represents a genuine reconciliation of interests.

A final comment. For the most part I shall suppose that the parties possess all general information. No general facts are closed to them. I do this mainly to avoid complications. Nevertheless a conception of justice is to be the public basis of the terms of social cooperation. Since common understanding necessitates certain bounds on the complexity of principles, there may likewise be limits on the use of theoretical knowledge in the original position. Now clearly it would be very difficult to classify and to grade for complexity the various sorts of general facts. I shall make no attempt to do this. We do however recognize an intricate theoretical construction when we meet one. Thus it seems reasonable to say that other things equal one conception of justice is to be preferred to another when it is founded upon markedly simpler general facts, and its choice does not depend upon elaborate calculations in the light of a vast array of theoretically defined possibilities. It is desirable that the grounds for a public conception of justice should be evident to everyone when circumstances permit. This consideration favors, I believe, the two principles of justice over the criterion of utility.

25. THE RATIONALITY OF THE PARTIES

I have assumed throughout that the persons in the original position are rational. In choosing between principles each tries as best he can to advance his interests. But I have also assumed that the parties do not know their conception of the good. This means that while they know that they have some rational plan of life, they do not know the details of this plan, the particular ends and interests which it is calculated to promote. How, then, can they decide which conceptions of justice are most to their advantage? Or must we suppose that they are reduced to mere guessing? To meet this difficulty, I postulate that they accept the account of the good touched upon in the preceding chapter: they assume that they would prefer more primary social goods rather than less. Of course, it may turn out, once the veil of ignorance is removed, that some of them for religious or other reasons may not, in fact, want more of these goods.

But from the standpoint of the original position, it is rational for the parties to suppose that they do want a larger share, since in any case they are not compelled to accept more if they do not wish to, nor does a person suffer from a greater liberty. Thus even though the parties are deprived of information about their particular ends, they have enough knowledge to rank the alternatives. They know that in general they must try to protect their liberties, widen their opportunities, and enlarge their means for promoting their aims whatever these are. Guided by the theory of the good and the general facts of moral psychology, their deliberations are no longer guesswork. They can make a rational decision in the ordinary sense.

The concept of rationality invoked here, with the exception of one essential feature, is the standard one familiar in social theory.¹⁴ Thus in the usual way, a rational person is thought to have a coherent set of preferences between the options open to him. He ranks these options according to how well they further his purposes; he follows the plan which will satisfy more of his desires rather than less, and which has the greater chance of being successfully executed. The special assumption I make is that a rational individual does not suffer from envy. He is not ready to accept a loss for himself if only others have less as well. He is not downcast by the knowledge or perception that others have a larger index of primary social goods. Or at least this is true as long as the differences between himself and others do not exceed certain limits, and he does not believe that the existing inequalities are founded on injustice or are the result of letting chance work itself out for no compensating social purpose (§80).

14. For this notion of rationality, see the references to Sen and Arrow above, §23, note 9. The discussion in I. M. D. Little, *The Critique of Welfare Economics*, 2nd ed. (Oxford, Clarendon Press, 1957), ch. II, is also relevant here. For rational choice under uncertainty, see below §26, note 18. H. A. Simon discusses the limitations of the classical conceptions of rationality and the need for a more realistic theory in "A Behavioral Model of Rational Choice," *Quarterly Journal of Economics*, vol. 69 (1955). See also his essay in *Surveys of Economic Theory*, vol. 3 (London, Macmillan, 1967). For philosophical discussions see Donald Davidson, "Actions, Reasons, and Causes," *Journal of Philosophy*, vol. 60 (1963); C. G. Hempel, *Aspects of Scientific Explanation* (New York, The Free Press, 1965), pp. 463-486; Jonathan Bennett, *Rationality* (London, Routledge and Kegan Paul, 1964), and J. D. Mabbott, "Reason and Desire," *Philosophy*, vol. 28 (1953).
