Hello, it is worth saying that abortion turned into a broadly followed act speaking for population management within the nineteenth century. The mom opted for an abortion after having had too many children. Occasionally, ladies go through disastrous health complications or maybe demise because of abortion. I consider the fact that abortion helped in preventing overpopulation in the nineteenth century and people had adapted to it. Many pieces of research prove a fetus within the first trimester has no specified right to be in her mother's womb and the mother has every right over control of her body and can abort (J Med Ethics Hist Med, 2009). In my view, Safe, legal and rare abortion is effective in managing the societies' population and this is a good act and artificial control of population preventing the harsh consequences of overpopulation. Based on these facts it is safe to say that abortion is morally right.

Hello, your work is pleasing. It is a fact that when abortion is banned, rape victims cannot seek help. Coping with rape is difficult, but dealing with a raped child is even more difficult. Poverty and poor living conditions do not improve living conditions after childbirth. Therefore, in this case, I find it necessary to recognize abortion not a crime so as not to negatively affect the fetus. Certain conditions require an abortion to keep the mother alive, and abortion is important in such cases. An exact example is when the baby develops in the mother's fallopian tubes and the mother dies when the baby reaches her full term. For the mother to survive an abortion must be conducted. Abortion should be legalized as a result (BBC, 2014).
