1. What is trending in your current field or the field you want to enter into?

Virtual care is among the current trends in the American healthcare system. Virtual care services will continue to develop all across continuum of care, from telemedicine consultations to online hospital treatment and home-based therapy (Almuslim & AlDossary, 2021). In February 2020, telehealth accounted for fewer than 1percent of Medicare general care appointments; by April, the figure had increased to 43percent, owing to the epidemic. This expansion looks to be sustainable, as healthcare professionals and patients alike embrace a new virtualized paradigm. Institutions will have to connect their virtual approach with the shifting demands of their consumers, growth plan, and developing payment mechanisms. It's not a panacea, but rather a logical development toward better supporting physicians and patients: virtual has to become the way facilities function instead of a separate element of the plan. Telemedicine can provide certain specialized doctors an edge since it allows them to see patients in their own homes. Allergists, for instance, could be able to recognize triggers in their environment that induce allergies. Neurologists, occupational and physical therapists, and others can monitor them and evaluate their capacity to maneuver and care for themselves at home. Telemedicine is also an excellent approach to obtain mental health evaluations and psychotherapy.

2. Is this person a thought leader?

The doctor being interviewed is a thoughtful leader. Throughout the interview she was talking about tremendous innovations in the field of health and medicine. According to her, medical innovations aim to improve health of all Americans and ensure patient and physician safety and convenience. During this pandemic she stated that, telehealth is preventing the spread

of corona virus as patients do not need to go to the hospital and interact with people. Sick people stay at home and receive treatment digitally therefore reducing chances of either contracting or spreading the virus. The doctor also said that telehealth saves on cost since the patient does not spend anything on transport. As per a recent Cisco worldwide poll, 74percent of people prefer simple accessibility to healthcare solutions to face-to-face encounters with physicians(Almuslim & AlDossary, 2021). Convenience is important in today's healthcare industry, and it is one of the benefits of telemedicine.

3. List 2 take-away items that you will adopt or find beneficial from the interview

The two take-away items are a pen and a paper. They are important in taking notes and writing down the email address of the interviewer in case he or she doesn't have a business card. The interviewee can later send a thank you note to her host.
