

Radwa Ahmed

Final draft project

(Option B)

12/04/2017

❖ Introduction: -

The purpose of this project is find what percent of students that have work study at Community College of Denver.

❖ The Hypothesis: -

Spence and I agreed that 30% have work study at Community College of Denver.

- The null hypothesis is that 30% of the students at CCD have work study.
- The alternative hypothesis is not equal 30% of students at CCD have work study.

The hypotheses are: -

$H_0 : P = 0.30$ (30% have w.s.)

$H_a : P \neq 0.70$

In the process of finding who have work study at CCD. I had to ask students who are coming in confluence building on fourth floor at academic support center for using the lap" if they have work study job at CCD. Since I asked the students that I found from confluence building randomly. Therefore, it is random sample. I specifically asked students who are currently attending school at CCD.

I surveyed students on three different days and that was on Monday, Wednesday, and Thursday and each day I surveyed students at different times in the day.
