Supersize me Response

I do not agree that Morgan's health status at the start of the project was terrific because after visiting several doctors the results were incredibly good. Morgan had 11 percent body fat which is low and weighed 185.5 pounds. The health status was found to be above average. I accord that Morgan should have eaten 2500 calories every day to maintain his diet. Nevertheless, on his McDonald's diet, Morgan ate an average of 5000 calories which was double what a normal adult should take. Furthermore, I consent that Ronald McDonald was recognized as the best by first graders because of the best marketing and advertisement on television. However, I do not agree that Ronald McDonald should not be banned because of the distorted food. Also, Ronald is the deadliest clown than pennywise because it has killed many people and is related to high rates of obesity in America. Similarly, I agree that the rate of obesity has skyrocketed among the teens and children in America and this has resulted in the development of an obese population. People need to be aware of what they eat and involve in active physical exercise. I also approve that Morgan felt sick and experienced gradual stomach discomfort which made him vomit. The reason for feeling this way is because Morgan was not used to taking toxic food which has an extreme amount of sugar.
