Environmental Biology Essay

In the contemporary scenario, everyone needs a thorough understanding of different functional skills to make a good living. To meet this objective, several environmental and social changes need to be put into effect illustrating how these changes can be actualized. The ecological biology industry is a cutting-edge scientist that allows students to research and develop a wide range of such practices. This paper provides a brilliant summary of two relevant films and these include 'The Story of Solution' and 'The Story of Change' films.

The film "The story of Change" talks about advocating for change and finding solutions for a democratic and dynamic world. We certainly buy the least dangerous and ethical products we can see when shopping, but this is not our concern; it is about disastrous policies and terrible businesses. As a result, we require a serious response to the situation. There is significant reform whenever people band together to seek job standards. To make a real and meaningful change, people should; share big thoughts on how things could be better for everyone, even when changing systems that do not want to be changed, work together in implementing the ideas and take massive action towards achieving the change and put their unique skills to work. We can change what the economy puts first and accommodate the solutions that we desire regardless of the effort needed or leaving our cultures and daily practices.

In the film "The Story of Solution", people who are up for a challenge try to solve hundreds of previously intractable problems. We haven't focused on the most pressing issues; we've been so focused on cheap and new items that we've overlooked things like safer, safer, and fairer issues. Our economy, like a game, has been designed by people to persuade everyone to follow set rules and gives us instructions on what the goal is. Of course, most proposals aim to increase spending, build new infrastructure and produce more commodities to improve our environment and the country at large. We urgently require gambling treatments. A ban on the use of plastic shopping cartons, for example, is a long-term solution to the problem of plastic shopping cart waste contaminating the environment. This strategy is challenging to implement, but it is doable when people solve the problem (Piegorisch & Bailer, 2020). A genuine solution empowers individuals, opens their eyes to fulfilment, accounts for all expenditures, and reduces the unfair wealth imbalance. For example, in Capannori, a town in Italy, local citizens are not just questioning the government and cooperatives on waste materials issues but are putting the waste into good use by promoting solutions to waste in several ways like recycling the trash or changing it to another helpful product.

In reflection, changes and solutions are everything we need to enhance the quality of life and change the world at large. However, I am convinced that change is one of the most inevitable facts that we ought to consider. To change our lives, there is a growing need for a reflective and informative investigation regarding the factors that allow and constrain changes to occur within our environment, economies and social life. It is worthy to assert that success in every change requires good communication, adequate understanding, behaviors, and positive attributes that cannot be realized in quantitative metrics (Piegorisch & Bailer, 2020). For that reason, knowledge gained from investigations will give an ultimatum on what needs to be changed in our culture of shopping and consumption. I totally support the fact that we need to cheer our growing economy from all perspectives. Nevertheless, we must remain united and strive towards attaining rules that are working without discrimination. Accounting from the films, our health indicators are worsening at an alarming rate and the economy is fluctuating as

noticed by the increased income inequality and a growing gap between the rich and the poor. I feel that changes and solutions are the most appropriate goals that need to be underscored in our current economy. Good culture, improved health practices, and lucrative and reliable jobs will definitely offer a good chance for a good living. It is true that through unity, we stand a good chance to establish healthy and sustainable future that's fair for all individuals.

Being a resister, oppose specific policies that slow down our development and the well-being of citizens. I advocate for changing bad policies and destructive culture in society, even by changing things that are part of our norms and daily life. As a resister, I will remain at the front line of change-making and bringing a solution that will benefit all citizens regardless of their social and economic status. I support ideas that help to make our education system better, our hospitals better, and more other kinds of stuff that will make our lives better, like the use of renewable energy and also environmental conservation. As a change maker, helping other change makers find their power to resist injustice is my main goal because with togetherness and helping each other, we can achieve our desired intentions (Woodward & Sheehy, 2017). I stand for justice and halting any destructive projects that affect the citizens in any way. For game-changing solutions, I stand with other change makers in airing our issues to the authorities concerned.
