Given Three Million Dollars

Student's Name

Institution Affiliation

Given 3 million dollars, there would be specific fundamental issues I would try to solve so as to make the world a better place. Though important, it is wise to note that people give less regard to the very place that houses us, the environment. It is imperative to understand the fact that we live in our environment, and it is, therefore, vital to ensure that we make the environment better each day. Not only us but also the other living things need a clean environment that efficiently supports their living. Due to these and other fundamental reasons, given the 3 million dollars, my significant investment towards improving the world to a better place is environmental protection and conservation, which will have a ripple effect of healthy people and living things.

First of all, it is essential to understand the fact that the environment entails those things that surround us, whether living or non-living. Due to this fact, it influences our day to day activities. The very immediate thing that affects our living things in our environment is trees. Despite how important they are, very few efforts have been made to ensure that they are well-take care. Trees are very beneficial in water conservation, preventing soil erosion as well as general wildlife support. Additionally, enough trees guarantee a continuous supply of enough quality air surrounding all living things (Elmendorf, 2018). Due to the importance of the trees, I would use a part of the 3 million dollars to facilitate the planting of trees all over the world. The part will be aiming at achieving an optimum forest cover across the globe. Though the part for tree planting might not be sufficient, I will ensure I create awareness on the importance of trees in our environment.

Additionally, in a bid to conserve marine life through environmental protection, I will invest another part of the 3 million dollars in coastal cleaning. It is important to note that marine life is as important as the other non-marine lives. Due to this fact, conserving them is a great way to make the world better since we shall be having ecosystem balance. The only way to protect these marine creatures is by ensuring that the environment that they live in is spotless.

The amount that I will direct towards conserving the marine lives will be basically cleaning the coastal ocean area. It is essential to note the fact that marine lives are very critical to the environment. Due to this fact, part of the 3 million dollars will be used for cleaning the coastal area from various plastics and other materials that significantly affect marine life (Liboiron, 2015). Additionally, out of this amount, some of it will be invested towards raising awareness about the importance of ocean cleanliness. This activity will be achieved through emancipating the ocean users to stop unnecessary littering of the ocean through plastics and other materials. Through this step, I will have made an effort towards ensuring that the world we live in is better just by a simple amount of money.

Similarly, another activity that can be geared towards making the world a better place through environmental conservation and protection is preventing pollution. In this step, I will invest another part of the 3 million dollars towards raising awareness about the effects of environmental contamination and the importance of safe ecological practices (Priskin, 2013). Water bodies, clean air as well as agricultural soils have considerably been polluted. Due to this fact, it is imperative to ensure that the environment is protected together with its resources from harmful pollutants. Therefore, spending some of the 3 million dollars on raising awareness about the importance of a clean environment since by doing this, I will be making the world a better place to live.
